

MINISTRY OF ECONOMY

DETERMINATION accepting the request of the interested party and declaring the initiation of the administrative procedure for the *antidumping* investigation on imports of steel screws or threaded bolts originating in the People's Republic of China, regardless of the exporting country.

On the margin a seal with the National Coat of Arms, which reads: United Mexican States – Ministry of Economy.

DETERMINATION ACCEPTING THE REQUEST OF THE INTERESTED PARTY AND DECLARING THE INITIATION OF THE ADMINISTRATIVE ANTIDUMPING INVESTIGATION PROCEDURE ON IMPORTS OF STEEL SCREWS OR THREADED BOLTS ORIGINATING IN THE PEOPLE'S REPUBLIC OF CHINA, REGARDLESS OF THE COUNTRY OF ORIGIN

Having seen the Determination at the initiation stage of administrative file AD_09-25 filed with the International Trade Practices Unit of the Ministry of Economy, hereinafter the Secretariat, this Determination is issued in accordance with the following

RESULTS

A. Application

1. On April 30, 2025, Clavos Nacionales México, S.A. de C.V., hereinafter Clavos México, and Clavos Nacionales C.N., S.A. de C.V., hereinafter Clavos C.N., or jointly the Applicants, filed the request to initiate the administrative investigation procedure for unfair international trade practices, in the form of price discrimination, on imports of steel screws or threaded bolts, hereinafter screws, originating in the People's Republic of China, hereinafter China, regardless of the exporting country.

2. The Applicants stated that, during the period under investigation, a large volume of imports of screws originating in China entered the Mexican market, at very low prices compared to the production costs of screws manufactured in Mexico. They pointed out that imports originating in China caused material injury and affected their economic and financial indicators, due to the pressure they exert when they were carried out under conditions of price discrimination.

3. They proposed the period of investigation from January 1, 2024 to December 31, 2024 and the period of injury analysis from January 1, 2022 to December 31, 2024. They presented arguments and evidence in support of their request for investigation, which are contained in the administrative file and were considered for the issuance of this Determination.

B. Applicants

4. Clavos México and Clavos C.N., are companies incorporated in accordance with Mexican laws. Among its main activities is the manufacture, production, transformation and general trade of all kinds of metal, hardware, hardware and construction products, including screws. They indicated as the address to receive notifications the one located at Paseo de España No. 90, Int. PH 2, Col. Lomas Verdes Tercera Sección, C.P. 53125, Naucalpan de Juárez, State of Mexico.

C. Product under investigation

1. Overview

5. Clavos México and Clavos C.N., indicated that the product under investigation is referred to as steel screws or threaded bolts with the following diameters and lengths:

- to. Diameter from 3.175 mm, onwards mm, or 1/8 inch to 50.8 mm or 2 inches.
- b. Length equal to or greater than 6.35 mm or 1/4 inch.

Source: https://importagar.com.pe/catalogo/page/2/?per_page=18 and <https://www.meneame.net/m/tecnolog%C3%ADa/https-www-neoteo-com-existen-tantos-tipo-s-tornillos>.

6. The Applicants noted that the following descriptions are not part of the coverage of the product under investigation: "stainless steel screws or bolts", "torx flat head screws (star heads)", "socket" (button-head Allen screw with inner hexagon), "butterfly (butterfly head screw)", "shoulder (metric Allen guide screw with hexagon)", "stock", "oppressor (Allen type with inner hexagon cup tip, they are hollow inside and have no head)", "expander (they have an integrated metal plug)", "J type (J head type)", "U type (U-type clamp with double thread at each of its ends)", "eye type (O-head type)", "ball (head type with a bolt or ball)", "internal hexagon Allen (cylindrical head Allen type screw with internal hexagon that requires a special wrench for use)", "metric threaded screws manufactured under ISO 4017-Hex head screws to the head", and "screws or bolts for automotive and aerospace use", from the International Organization for Standardization, hereinafter ISO, for acronym in English for Standardization.

2. Features

7. The Petitioners indicated that the steel threaded screws or bolts under investigation have the following characteristics:

- to. They are a cylindrical piece of steel with a spiral protrusion that allows it to be threaded in order to hold pieces in place. It is made up of a head that can be round, hexagonal, square, flat, smooth, slotted or any other shape, and a body or stem that can be smooth or threaded (slotted) partially or totally.
- b. Its main component is low carbon steel, medium carbon steel, high carbon steel and alloy steel, either heat treated or non-heat treated, which allows it to give the hardness to the screw or bolt.
- c. It can have steel color finishes (*Plain*), black, electrolytic tropicalized, electrolytic galvanized and hot-dipped galvanized. Depending on the type of screw finish, they can have a black, yellowish, chrome, or silver appearance.
- d. In general, they can have a unified rope, hereinafter UN, for the acronym of *Unified*; Thick Unified Unit, hereinafter UNC stands for *Unified Coarse*; special unified organization, hereinafter UNS, for *Unified Special*; Fine unified, onwards *UNF*, for *Unified Fine*; and CLASS 2A (fit rating for external threads, such as those for screws and bolts), made up of series of threads or different combinations (diameter-pitch) of threads per inch applied to a series of specific diameters.
- and. Due to their applications and uses, screws can have a hole at any point on the body or head, as well as a modification or adaptation along the body, either a notch or groove.

3. Tariff treatment

8. The Petitioners indicated that the product under investigation enters the Mexican market under the tariff headings of the Tariff of the Law on General Import and Export Taxes, hereinafter TIGIE, 7318.15.04 with Commercial Identification Number, hereinafter NICO, 00, and 7318.15.99, NICO 04, 05, 06, 07, 08 and 99.

9. In accordance with the "Decree issuing the Law on General Import and Export Taxes", hereinafter LIGIE Decree 2022, and the "Agreement by which the Commercial Identification Numbers (NICO) and their correlation tables are disclosed", hereinafter NICO Agreement 2022, published in the Official Gazette of the Federation, hereinafter DOF, on June 7 and August 22, 2022, respectively, the description of the tariff lines under which the product under investigation is classified is as follows:

Tariff Heading	Description
Chapter 73	Articles of foundry, iron or steel
Item 73.18	Screws, bolts, nuts, lag screws, threaded spikes, rivets, pins, cotters, washers (including spring washers) and the like, of iron or steel.
	- Threaded items:
Subheading 7318.15	-- Other screws and bolts, including with their nuts and washers.
Section 7318.15.04	Screws with a diameter of less than 6.4 mm (1/4 inch) and a length of less than 50.8 mm (2 inches), except those made of stainless steel and those recognizable for aircraft or automotive use.
NICO 00	Screws with a diameter of less than 6.4 mm (1/4 inch) and a length of less than 50.8 mm (2 inches), except those made of stainless steel and those recognizable for aircraft or automotive use.
Section 7318.15.99	The others.

NICO 04	Screws with a diameter of less than 6.4 mm (1/4 inch) and a length of 50.8 mm (2 inches) or more, except as specified in trade identification numbers 7318.15.99.01, 7318.15.99.03 and 7318.15.99.09
NICO 05	Screws with a diameter of 1/4 inch (6.4 mm) or more but less than 3/4 inch (19.1 mm) and a length of less than 6 inches (152.4 mm), except as provided for in trade identification numbers 7318.15.99.01, 7318.15.99.03, and 7318.15.99.09.
NICO 06	Screws with a diameter of 6.4 mm (1/4 inch) or more but less than 19.1 mm (3/4 inch) and a length of 152.4 mm (6 inches) or more, except as provided for in trade identification numbers 7318.15.99.01, 7318.15.99.03, and 7318.15.99.09.
NICO 07	Screws with a diameter of 19.1 mm (3/4 inch) or more and a length of less than 152.4 mm (6 inches), except as provided for in trade identification numbers 7318.15.99.01, 7318.15.99.03 and 7318.15.99.09.
NICO 08	Screws with a diameter of 19.1 mm (3/4 inch) or more and a length of 152.4 mm (6 inches) or more, except as provided for in trade identification numbers 7318.15.99.01, 7318.15.99.03 and 7318.15.99.09.
NICO 99	The others.

Source: LIGIE Decree 2022 and NICO Agreement 2022.

10. According to the "Decree amending the Tariff of the Law on General Import and Export Taxes", published in the DOF on April 22, 2024, tariff headings 7318.15.04 and 7318.15.99 of the TIGIE are subject to a tariff of 35%, as of April 23, 2024, with a validity of two years. In addition, the Decree provides that, in accordance with international law, the importation of goods originating in countries with which Mexico has entered into a trade agreement, if the requirements established therein are met, shall be carried out under the preferential tariff treatment of originating goods provided for in the corresponding international instrument.

11. The unit of measurement, for steel screws or bolts, established in the TIGIE, is the kilogram.

4. Production process

12. The Petitioners indicated that the main input for the manufacture of the product under investigation is low-, medium- or high-carbon steel wire rod and alloy steels. Other inputs are lubricating oil, degreaser, sulfuric acid, boric acid, zinc phosphate, calcium hydroxide and electrical energy, among others. Likewise, specialized machinery with the capacity to produce screws of various types, calibers and lengths is used in production; Arrays; dies for drawing and forging; tempering furnaces, and rollers or combs.

13. The Petitioners stated that the production process of the product under investigation consists mainly of the following stages:

- to.** Preparation of moulds, dies and wire rod. The wire rod, which is the main input, is prepared, which goes through a chemical or mechanical pickling process and lubricant (phosphate and borax) is adhered to it to be drawn up.
- b.** Added header. The wire is forged and stamped to shape the head screw by striking at different stations of the machinery.
- c.** Sharpening and threading. The screws are put through press-on rollers to form the rope (screw milling).
- d.** Heat or thermal treatment for grade screws (structural or alloyed). It consists of heating the screw using special ovens to reach the desired strength and hardness.
- and.** Surface treatment. The screws are washed with water to remove impurities such as grease and sludge that are acquired during the previous processes.
- f.** Packing. After passing through a quality check, the screw is packaged as a finished product.

14. The Applicants provided videos showing the production process of steel screws or threaded bolts from China, obtained from the YouTube channel "Satisfactory Process", the video "Millions a Day! Mass Screw Production Process in China" on the <https://www.youtube.com/watch?v=WJvQZko8uiU> website and, in respect of the Chinese company Shenzhen Fulongda Hardware Products Co., Ltd., referred to the websites <https://cloud.video.taobao.com/play/u/2647184926/p/2/e/6/t/1/450927274794.mp4> and https://caiyuanbao.alicdn.com/avpl/community/copy/018d-e0a80ae3-a1bf4fb1-8dc06b52-4730/20221217_34f3a4e6942e9727_392017395839_mp4_264_id_taobao.mp4?auth_key=1750201759-0-0-a8b6d5d8ec6264c10ca35edfb283b123&biz=community-ca97940cf143d842&t=2166083e17501990590544199e1887&t=2166083e17501990590544199e1887&b=community&p=cloudvideo_http_cbu_jihuohui.

5. Standards

15. The Applicants pointed out that the product under investigation is produced under various norms and standards, taking into account chemical and mechanical properties, dimensions and threads. Based on the information provided by the Applicants, the Secretariat noted that the updated norms and standards are as follows:

- to. Chemical and Mechanical Properties: Society of Automotive Engineers, SAE-J429 "Mechanical and Material Requirements for Externally Threaded Fasteners," SAE-J429; American Society for Testing and Materials (ASTM), ASTM A29/A29M-23 "Standard Specification for General Requirements for Hot Forged Carbon and Alloy Steel Bars," hereinafter ASTM A29/A29M-23; ASTM A307-21 "Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rods with Tensile Strength of 60,000 PSI," hereinafter ASTM A307-21; ASTM F3125/F3125M-25 "Standard Specification for High-Strength Structural Bolts and Assemblies, Heat-Treated Steel and Alloy Steel, Dimensions in Inches of 120 ksi, 144 Ksi, and 150 Ksi Minimum Tensile Strength, and Metric Dimensions of 830 MPa and 1040 MPa Minimum Tensile Strength," hereinafter ASTM F3125/F3125M-25; ASTM A193/A193M-25 "Standard Specification for Alloy Steel and Stainless Steel Bolts for High Temperature or High Pressure Service and Other Special Applications," hereinafter ASTM A193/A193M-25; ASTM A354-17e2 "Standard Specification for Bolts, Studs, and Other Externally Threaded Fasteners of Tempered and Tempered Alloy Steel," hereinafter ASTM A354-17e2, and ASTM A394-08(2024) "Standard Specification for Steel, Zinc-Coated, Bare Transmission Tower Bolts", hereinafter ASTM A394-08(2024).
- b. Dimensions: from the American Society of Mechanical Engineers, hereinafter ASME B18.2.1-2012 (R2021) "Square, Hex Head, Thick and Oblique Hex Head Bolts, and Hex Bolts, Hex Thick Hex Bolts, Hex Flange Bolts, Lobed Head Bolts and Lag Screws (Inch Series)", hereinafter ASME B18.2.1-2012 (R2021), and ASME B18.2.6-2019 "Fasteners for Use in Structural Applications", hereinafter ASME B18.2.6-2019.
- c. Threading: ASME B1.1-2024 "Unified Inch Screw Threads", hereinafter ASME B1.1-2024.
- d. To support the above, they provided documentary support for the rules.

16. In addition, the Petitioners pointed to other standards that could apply to the product under investigation: ASTM F1941/F1941M-16(2025) "Standard Specification for Electroplated Coatings on Mechanical Fasteners, in Inches and Metric Units," hereinafter ASTM F1941/F1941M-16(2025); ASTM B633-23 "Standard Specification for Zinc Electroplated Coatings on Iron and Steel," hereinafter ASTM B633-23; ASTM F2329/F2329M-15(2023) "Standard Specification for Hot Dip Zinc Coating, Requirements for Application on Carbon and Alloy Steel Bolts, Screws, Washers, Nuts, and Special Threaded Fasteners," hereinafter ASTM F2329/F2329M-15(2023); ASTM A153/A153M-23 "Standard Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware", hereinafter ASTM A153/A153M-23, and ASTM A449-14(2020) "Standard Specification for Heat-Treated Steel Hex Screws,

Bolts, and Studs with a Minimum Tensile Strength of 120/105/90 ksi for General Purpose", hereinafter ASTM A449-14(2020).

6. Uses and functions

17. The Applicants indicated that the main use of the product under investigation is to act as a fastener, mainly in the construction, furniture, electrical and electronic appliance industries, and to a small extent in the domestic sector. In general, the product under investigation is used in practically all industries, since they are basically consumer goods and are used as fasteners in a number of products and goods of common use, so they can be used as an input.

D. Potential stakeholders

18. The parts of which the Secretariat is aware and which may have an interest in appearing in this investigation are the following:

1. National production companies

Apisaf Fasteners, S.A. de C.V.
Av. Belisario Domínguez No. 32, Interior 6
Col. Villa de Tezontepec Centro
C.P. 43880, Villa de Tezontepec, Hidalgo

E. Prevention

19. On May 26, 2025, the Ministry instructed the Applicants, inter alia, to correct various procedural aspects; to provide clarifications regarding the company Clavos México in its capacity as manufacturer of the product like the one under investigation, and the estimates of the volume of production of each company that makes up the domestic industry; to formulate clarifications related to the definition of the product under investigation; to address various related issues with the database of imports, which they obtained from the National Association of Manufacturers of Tools and Hardware Products, A.C., hereinafter ANFHER; explain why the transportation of a 20-foot container relates to the product under investigation; present the evidentiary support of 60 quotes, and justify why they are a reasonable basis to prove the adjustment for maritime freight; address various inconsistencies related to the internal freight adjustment in China; describe issues related to insurance adjustment; provide the profile of the consulting company that carried out the "Internal Price Study in the People's Republic of China on Fasteners", hereinafter referred to as the Price Study, of the product under investigation and identify its main activities; provide evidence to prove that the 16 companies from which the consultant obtained the prices are a reasonable basis for calculating the normal value and their reasonableness to use them, taking into account: their presence in the screw market in China, production, installed capacity, number of employees, among others; justify why the Price Study is a reasonable basis for calculating normal value and provide various clarifications on the calculations contained therein; provide the methodology for calculating the prices provided for screws per piece; explain how they made sure that the price references used for the calculation of normal value have a logical market behavior; resubmit the calculation of the price discrimination margin; address various aspects of the letters of support from five domestic producers of the like product; explain how they estimated a production volume figure and provide the methodology used to calculate it, as well as the assumptions considered; clarify issues related to the methodology for identifying the value and volume of imports of the product under investigation; display a list of the companies that should be excluded from import operations;

clarify why Clavos Mexico did not report production figures in the period under investigation; and to make various clarifications related to some economic indicators; clarify the behavior of the inventories reported by Clavos C.N.; indicate how they estimated the installed capacity of the product similar to the one under investigation; they will present their audited financial statements for fiscal year 2024; and explain why the contraction in domestic demand and the fall in productivity in the period analyzed and investigated would not be the cause of the injury. Clavos México and Clavos C.N. filed their response on June 23, 2025.

F. Information Requests

20. On May 27, 2025, the Ministry required Apisaf Fasteners, S.A. de C.V., hereinafter Apisaf Fasteners, and Forjadora Panamericana, S.A. de C.V., hereinafter Forjadora Panamericana, to indicate whether during the period January 2022-December 2024 they manufactured screws and, if so, to provide their production volumes, sales to the domestic and export markets, as well as their installed capacity for the period January 2022-December 2023 and January 2023-December 2024; indicate whether during the periods referred to they imported the product under investigation and, if so, provide a sample of pedimentos and invoices. In addition, for Forjadora Panamericana, to state its position regarding the request to initiate this investigation. The deadline expired on June 10, 2025. However, Apisaf Fasteners and Forjadora Panamericana did not submit their response.

RECITALS

A. Jurisdiction

21. The Secretariat is competent to issue this Determination, in accordance with Articles 1, 5 and 12.1 of the Agreement on the Implementation of Article VI of the General Agreement on Tariffs and Trade of 1994, hereinafter *the Antidumping Agreement*; 16 and 34, sections V and XXXIII of the Organic Law of the Federal Public Administration; 5, section VII and 52, sections I and II of the Foreign Trade Law, hereinafter LCE, and 1, 2, section A, section II, numeral 7, 4 and 19, sections I and IV of the Internal Regulations of the Ministry of Economy.

B. Applicable Law

22. For the purposes of this proceeding, the *Antidumping Agreement*, the LCE, the Regulations of the Foreign Trade Law, hereinafter RLCE, and, in addition, the Federal Tax Code, the Regulations of the Federal Tax Code, the Federal Law of Contentious Administrative Procedure and the Federal Code of Civil Procedure, the latter of supplementary application, are applicable. in accordance with the provisions of Articles 5 and 130 of the Federal Tax Code.

C. Protection of Confidential Information

23. The Secretariat may not publicly disclose the confidential information submitted by interested parties, or the confidential information attached, in accordance with Articles 6.5 of the *Antidumping Agreement*, 80 of the FTA, and 152 and 158 of the RLCE. However, interested parties may obtain access to confidential information, provided that they meet the requirements set out in Articles 159 and 160 of the RLCE.

D. Procedural legitimacy

24. In accordance with the provisions of paragraphs 120 to 131 of this Determination, the Ministry determines that Clavos México and Clavos C.N. are entitled to request the initiation of this administrative investigation proceeding, in accordance with Articles 5.1 and 5.4 of the *Antidumping Agreement*, and 50 of the FTA.

E. Period investigated and analyzed

25. The Ministry determines to set the period from January 1, 2024 to December 31, 2024 as the period of investigation and the period of injury analysis as the period from January 1, 2022 to December 31, 2024, periods proposed by the Applicants, since these are in accordance with the provisions of Article 76 of the RLCE and, additionally, they are consistent with the "Recommendation on Data Collection Periods for *Antidumping Investigations*" of the Committee on Antidumping *Practices* of the World Trade Organization (document G/ADP/6 adopted on May 5, 2000).

F. Price Discrimination Analysis

1. Export price

26. The Petitioners calculated the export price from the database of imports of steel screws or threaded bolts that entered Mexico under tariff headings of TIGIE 7318.15.04, NICO 00 and 7318.15.99 NICO 04, 05, 06, 07, 08 and 99, during the period under investigation. The import statistics were provided by ANFHER, through the General Directorate of Customs Investigation of the National Customs Agency, hereinafter ANAM.

27. They pointed out that products other than the one under investigation are also imported under these tariff headings. Therefore, they presented a methodology for filtering the database, which includes the following criteria:

- to. They identified the operations with the period and country investigated.
- b. They included only definitive and temporary imports.
- c. They included operations that, by product description, corresponded to the steel screws or threaded bolts investigated.
- d. They excluded operations that originated in Mexico.
- and. They excluded transactions with descriptions that were found to be outside the definition of the product under investigation, and those combined with other items, such as washers, nuts, and washers.
- f. They excluded import operations that corresponded to a temporary import regime, such as A4, AD, AF, BH, F2, IN, M3, and V1.
- g. They excluded operations that, due to their corporate name, correspond to the automotive and aerospace industries.
- h. They excluded operations with descriptions such as "stainless steel screws," "*torx* (star head)", "*Socket*", "butterfly", "shoulder", "stock", "oppressor", "expander", "J", "U", "eye", "ball" and "inner hexagon" (type *Allen*), "threaded rods", "steel rods", and "headless screws", "stainless screws", "unthreaded bolts", "spikes", "headless screws", "metric threaded screws manufactured under ISO 4017-Hex head screws to the head", "screws for automotive and aerospace use", among others.

28. The Secretariat noted that the Applicants classified descriptions as both investigated and non-investigated product, simultaneously. It also identified imports classified as products under investigation related to the payment of countervailing duty, and others with companies focused on the automotive and aerospace sectors. In this regard, the Secretariat warned the Applicants to clarify this situation, as indicated in point 19 of this Determination.

29. In response, the Applicants explained that the main reason they classified product descriptions as subject and non-investigated is due to the importer's line of business, which is why descriptions of included and discarded screws are included in the calculation of the export price. They pointed out that they excluded operations with descriptions related to automotive and aerospace companies.

30. In relation to the transactions that paid countervailing duties, the United States noted that these transactions are part of the product under investigation. The United States emphasized that they are not aware of the existence of a countervailing duty in force applicable to the product under investigation, nor of the reason why these imports are identified with the payment of any countervailing duty.

31. For its part, the Ministry obtained the import statistics of threaded screws and bolts originating in China, which entered Mexico through tariff headings of TIGIE 7318.15.04, NICO 00 and 7318.15.99 NICO 04, 05, 06, 07, 08 and 99, during the period under investigation, which make up the statistics of Mexico's Merchandise Trade Balance, hereinafter Balance of Trade, prepared by the Tax Administration Service, hereinafter SAT, the Secretariat, the Bank of Mexico, and the National Institute of Statistics and Geography, hereinafter INEGI. It compared that information with that provided by the Requestors and found differences in the number of transactions, description of the goods, value in United States dollars, hereinafter dollars, and volume in kilograms.

32. In view of the foregoing, the Ministry decided to use the database of import statistics reported by the Balance of Trade for the calculation of the export price, considering that the operations included in that database are obtained after validation of the customs declarations that occur in a framework of exchange of information between customs agents. on the one hand, and the customs authority on the other, which are reviewed by the Bank of Mexico and, therefore, are considered the best information available.

33. Based on this information, the Ministry considered reasonable the methodology of the Applicants for the identification of the product under investigation, based on the code of pedimento, origin, description contained in the operations and the line of business of the importing companies. Additionally, it determined to exclude those operations related to the automotive and aerospace industries.

to. Determination

34. Based on Articles 2.4.2 of the *Antidumping* Agreement, and 40 of the RLCE, the Ministry calculated a weighted average export price in dollars per kilogram, for imports of steel screws or threaded bolts with a diameter between 3.175 mm or 1/8 inch and 50.8 mm or 2 inches with a length equal to or greater than 6.35 mm

or 1/4 inch, originating in China, with the information provided by the Applicants and that which she herself provided.

b. Adjustments to the export price

35. The Petitioners explained that they calculated the weighted average export price without adjusting in dollars per kilogram, based on the customs value of the merchandise reported in the ANAM import base, since it does not reflect the ex-factory price of the goods.

36. In view of the foregoing, they proposed adjusting the export price for terms and conditions of sale, specifically, for the concepts of domestic freight in China, maritime freight from China to Mexico, maritime insurance, marketing margin and credit.

i Methodology for calculating adjustments to the export price

37. The Petitioners noted that the merchandise under investigation is transported in 20-foot containers. They stressed that under the terms of ISO 668 "Manual on Container Control", hereinafter ISO 668 standard, containers are limited by a maximum weight of 21,700 kilograms. They provided the documentary support for this regulation.

38. The Ministry reviewed the information and identified that, although the standard details the physical specifications of a 20-foot container, the Requestors did not provide an explanation as to the relationship between the container and the subject merchandise. Therefore, it warned them to provide a reasonable explanation demonstrating that the product under investigation is transported in a 20-foot container, as described in point 19 of this Determination.

39. In response, the Petitioners stated that the 20-foot container is the most widely used container in international trade and that this type of dry cargo container makes up more than 80% of the world fleet. They contributed Internet articles on the capacity of the 20-foot containers, which they obtained from the following Internet pages <https://logiber.com/blog/contenedor-20-pies>; www.icontainers.com/es/ayuda/contenedor-20-pies; and www.dripcapital.com/es-mx/recursos/blog/contenedor-de-20-pies; which mention the main characteristics and advantages through which this container is the universal means of transporting goods.

40. They emphasized that the quotes obtained are for merchandise in general and that screws are merchandise that does not require special packaging, so a standard container can be validly used to transport the product under investigation.

1) Internal freight

41. For the internal freight adjustment, they provided ground freight quotes that they obtained from the company SeaRates by DP World, hereinafter SeaRates, from their <https://www.searates.com/about/> website. They highlighted that SeaRates is a digital platform with experience in the logistics and freight transport sector, which offers various services including land freight in various countries.

42. They explained that, in order to determine the origin of the quotations, they used the addresses in the cities where the main producers of the product under investigation identified in the Price Study, carried out by a consulting firm in January 2025, are located.

43. They added that the quotations report the cost of transportation for a 20-foot container from the cities of Huizhou, Hebi, Baiyun, Foshan, Dongguan, Guangzhou, Handan, Zhongshan, Wenzhou, Shenzhen and Suzhou to the port of Ningbo, Yantian or Qingdao in China.

44. Because the quotes were outside the period under investigation, they applied an inflation adjustment with the information on China's monthly inflation obtained through the Organization for Economic Cooperation and Development, from the Internet platform Inflation Tool, [https://data-explorer.oecd.org/vis?fs\[0\]=Topic%2C1%7CEconomy%23ECO%23%7CPrices%23ECO_PRI%23&pg=0&fc=Topic&bp=true&snb=16&df\[ds\]=dsDisseminateFinalDMZ&df\[id\]=DSD_PRICES%40DF_PRICES_ALL&df\[ag\]=OECD.SDD.TPS&df\[vs\]=1.0&pd=2024-01%2C2024-12&dq=CHN.M.N.CPI.PA.T.N.GY&ly\[rw\]=REF_AREA&ly\[cl\]=TIME_PERIOD&to\[TIME_PERIOD\]=false&vw=tb](https://data-explorer.oecd.org/vis?fs[0]=Topic%2C1%7CEconomy%23ECO%23%7CPrices%23ECO_PRI%23&pg=0&fc=Topic&bp=true&snb=16&df[ds]=dsDisseminateFinalDMZ&df[id]=DSD_PRICES%40DF_PRICES_ALL&df[ag]=OECD.SDD.TPS&df[vs]=1.0&pd=2024-01%2C2024-12&dq=CHN.M.N.CPI.PA.T.N.GY&ly[rw]=REF_AREA&ly[cl]=TIME_PERIOD&to[TIME_PERIOD]=false&vw=tb).

45. Based on the analysis of the information provided by the Applicants, the Secretariat instructed them to provide documentary support to support the figures adjusted for domestic freight; to explain the relationship between freight and the product under investigation, the rationale for determining the cities of origin, and the main ports in China that they used to estimate the quotations, as well as the tests and calculation methodology for the adjustment for inflation in the event that the contributions were outside the period under investigation, as indicated in point 19 of this Determination.

46. With respect to the SeaRates quotes, the Applicants indicated that, due to an error, they did not submit all the support of the quotes in the corresponding file. They provided the complete information contained in the screenshots with the domestic freight quotes, which they used to calculate this adjustment.

47. As to the cities and ports of origin that they used as the basis for estimating the quotations, they reiterated that they used the address of the screw-producing companies in China, which they used to determine the normal value in China. For the selection of the main cargo ports in China, they used as a reference the AC2 Southbound route, from the <https://www.dripcapital.com/es-mx/recursos/blog/rutas-maritimas-a-mexico> website, which they indicated indicates that the main Chinese ports of Shanghai, Ningbo, Qingdao and Yantian, are the most common for the transfer of goods from China to the ports of Manzanillo and Lázaro Cárdenas in Mexico.

48. Because the contributions presented in the response to the prevention corresponded to the months of January and February 2025, they deflated them to bring them to the period under investigation, based on the information described in point 44 of this Determination. However, they updated the information on inflation in China for the entire period under investigation.

49. The Secretariat reviewed the quotes presented in the response to the prevention and observed that: (i) they report an amount in dollars per kilogram for a 20-foot container, and (ii) the starting points correspond to the addresses of companies that manufacture screws and threaded bolts, which were reported in the Price Study, basis for determining the normal value.

50. It also replicated and validated the methodology used to deflate the prices of the quotations and bring them to the period under investigation. Therefore, the Secretariat decided to accept the adjustment for internal freight.

2) Sea freight

51. The Petitioners indicated that they obtained the amounts from three different sources of information for the period under investigation. They explained that the route considered for the estimation of the quotes were the ports of origin: Shenzhen, Xiamen, Ningbo, Shanghai, Qingdao, Tianjin, Nansha, Zhongshan, Wuhan, Nanjing, Xingang, Yantian, Shekou, Hong Kong, Busan and Kaohsiung in China, bound for the ports of Manzanillo and Lázaro Cárdenas, Mexico. They explained that the prices correspond to a 20-foot container with a capacity of 21,700 kilograms. They provided ISO 668.

52. In addition, they added that the quotations constitute a reasonable basis for supporting the proposed maritime freight, because they are made up of three different, unrelated sources of information, specialized in the transport of goods, and have various certifications in the market. They provided the profiles of the companies used, from which they obtained such quotes, and their websites: Sunniness Logistics Co., Ltd., <https://www.sunniness.net/about>; Shenzhen Golden Shipping Co., Ltd., <https://www.all-forward.com/net/shenzhengoldenshippingcoltd>, and Shenzhen Sunpro Logistics Co., Ltd., <https://www.szsunprologistics.com/en.html>.

53. Based on the analysis of the information, the Ministry directed the Requestors to submit documentary support for the ocean freight quotes, an explanation as to why those quotes are a reasonable basis for calculating the adjustment, and how they related to the activity of transporting the subject merchandise from China to Mexico during the period of investigation, as indicated in point 19 of this Determination.

54. In response, the Applicants submitted screenshots of the emails through which they received the quotes from the companies indicated in point 52 of this Determination. They indicated that the quotes are a reasonable basis for calculating the adjustment, since they were obtained for the months that comprise the period under investigation and come from companies that have extensive experience in the transportation of goods.

55. They calculated the adjustment as a simple average of the dollar price of the quotes by the container capacity.

56. The Secretariat reviewed the information in the e-mails containing the quotes provided by the Applicants, and noted the following:

- to.** He consulted the website of the three suppliers of the quotations that continue in operation.
- b.** The references refer to dollar prices for a 20-foot container during the period under investigation.
- c.** He identified the ports of origin in China and of entry in Mexico.
- d.** It acknowledged that the Applicants deducted an amount lower than the simple average obtained from the total of the contributions.

57. In view of the foregoing, the Ministry applied the amount for the proposed maritime freight adjustment, based on the information and application methodology provided by the Applicants.

3) Marine insurance

58. In calculating the marine insurance adjustment, they submitted information from the company Hamburg Sud, its website www.hamburgsud.com. They pointed out that it is a shipping company with experience in logistics and freight transport. They added that, among the services offered, is "*value protect*", whose objective is to protect goods from any injury that arises in their transport.

59. To determine the value of the merchandise, the Applicants multiplied the average export price (unadjusted for the period of investigation) by 21,700 kilograms, which corresponds to the capacity of a 20-foot container. In this way, they determined the price to be paid in dollars per container.

60. Based on the analysis carried out, the Ministry instructed the Applicants to submit the quote that supported the "*value protect*" service, the methodology followed by the shipping company to determine the prices of insurance per container, and a justification of the relationship of the amount of insurance calculated with the product and the period under investigation, as indicated in point 19 of this Determination.

61. In their reply, they stated that they obtained the information directly from the website of the company Hamburg Sud, now Maersk, www.maersk.com, which indicates the protection services offered by the shipping company, according to the value and characteristics of the goods transported. They presented screenshots with the information of the services and prices offered by the aforementioned shipping company.

62. With respect to the relationship between the insurance and the product under investigation, they indicated that it corresponds to a price per 20-foot container for dry cargo, such as steel screws or threaded bolts. They added that the prices obtained did not change with respect to the prices reported in the period under investigation.

63. The Secretariat reviewed the information submitted, went to the shipping company's website and observed its operation. In addition, he identified that this company offers various packages related to maritime insurance depending on the value of the cargo, and that the amount of the adjustment corresponds to a 20-foot container to transport dry cargo.

64. The Secretariat applied the amount observed in the evidence provided by the Applicants.

4) Credit

65. For the credit adjustment, the Applicants provided the average of the 1-year and 5-year "LPR Loan Market Reference Rate", which it obtained from the Bank of China's website, https://www.bankofchina.com/fimarkets/lilv/fd32/201310/t20131031_2591219.html.

66. The Secretariat reviewed the information. However, it did not have sufficient evidence that the prices reported in the import database correspond to transactions in which a credit was incurred in the payment of the merchandise under investigation.

5) Marketing margin

67. The Applicants noted that, because the exports were not made directly by the Chinese producing companies, they adjusted the export price by marketing margin. They indicated that, based on their experience in the market for the production and marketing of the product under investigation, they considered that a reasonable marketing margin is between 15% and 30%.

68. However, both in their response to the official form and to the prevention, they mentioned that they did not have the evidence to demonstrate the amount to be applied, which is why they did not consider the adjustment in their calculation of the export price.

c. Determination

69. Pursuant to Articles 2.4 of the *Antidumping* Agreement, 36 of the FTA, and 53, 54, and 58 of the RLCE, the Secretariat adjusted China's export price for domestic freight, sea freight, and marine insurance in accordance with the information and methodology provided by the Applicants.

2. Normal value**to. Internal prices**

70. The Applicants noted that China continues to be a non-market economy. However, given the availability of price information for steel screws or threaded bolts, the European Commissioners determined to calculate the normal value with the domestic price option of the product under investigation in China's domestic market.

71. To prove the normal value, they provided the Price Study, prepared by a consulting firm, which they indicated has its office in Shanghai, China. They specified that it is a company that has access to various types

of products, prices, and production companies that allow it to develop a price study on a specific product. They presented the website of the consulting company that carried out the study in question.

72. They indicated that the aforementioned consulting firm obtained the prices through two business-to-business marketing search engines, hereinafter B2B: i) 1688, and ii) Love Procurement. They presented the profiles of these companies and their websites. The United States asserted that the reported prices are within the period under investigation and come from screw-producing companies in China. They added that the references record the characteristics of the product under investigation.

73. They pointed out that the prices provided refer to the sales prices of screws from 16 producing companies for sale within the domestic market of China. They indicated that the references are reported in pieces. To report prices in kilograms, they developed a conversion methodology based on information published on the websites of eight of the 16 Chinese companies.

74. For the rest of the companies, they provided a worksheet with the weight per piece of the screws with information specific to the Applicants, from which they calculated the average weight for a screw.

75. They pointed out that because the prices were reported in *renminbis*, hereinafter RMB, they converted them into dollars based on the information on the average exchange rate they obtained from the Internet page <https://www.sfec.com/Info?pgn=Information&type=1> and from the government of the United States of America, hereinafter the United States, the Federal Reserve Bank of St. Louis <https://fred.stlouisfed.org/series/DEXCHUS>. They presented the screenshots with the exchange rates they obtained from both sources of information.

76. They stated that, in the Price Study, the references reported are at the ex-factory level. They added that the prices are free of discounts, rebates and bonuses.

77. The United States emphasized that the prices of steel screws or threaded bolts, presented in the Price Study, are a reasonable basis for determining normal value in this investigation, for the following:

- to. The Price Study was prepared by the consulting firm's China office, which analyzed the specific screw market.
- b. The main B2B search engines in China were used.
- c. Direct sources and Internet pages in the Mandarin language were used.
- d. The sources from which the quotes were obtained specify that the sale is destined for the Chinese domestic market.
- and. The information corresponds to 16 companies that produce screws, without any relationship, that offered the goods for the domestic market.
- f. The consultations were carried out in different months of the period under investigation.
- g. The prices were compiled by a company specialized in obtaining prices in China's domestic market.

78. The Secretariat reviewed the information submitted by the Applicants, through the consulting firm's website, and identified that it is a consulting firm founded in Hong Kong in 2008. He noted that it is a leading company in quality inspections and project development.

79. In view of the foregoing, it instructed the Applicants to provide, on the basis of the profile of the consulting firm, further information to identify the main activities it carries out, to identify whether it conducts price studies, to provide evidence to support that the 16 companies are producers of screws and threaded bolts, and to provide a reasonable explanation of the feasibility of using the price references from those companies to calculate the normal value of the merchandise under investigation in China, as set out in paragraph 19 of this Determination.

80. In response, the Applicants stated that the consulting firm's website shows a section explaining that the consulting firm's team is involved throughout the purchasing process, from the moment the supplier is carried out, until the delivery of the merchandise to the client's warehouse. They added that it is in charge of requesting price quotes and classification of the merchandise in the country of origin, and therefore, the consulting firm has enough experience to develop a price study.

81. They pointed out that both the consulting firm and the price reference sources have been used by the Ministry in *Antidumping* investigations for more than five years. They presented a list with some research as a reference. Therefore, they reiterated that the consulting company has sufficient experience to develop a price study, such as the one required for this investigation.

82. In order to support the fact that the companies from which the prices were obtained are producers of the screws under investigation, they provided screenshots of the Internet pages for 12 of the 16 companies from which they obtained the prices, from which they observed that the line of business corresponds to the

manufacture of screws, or, they are part of the construction industry. For the remaining four companies, they did not provide information on their line of business.

83. They specified that three of the 12 companies were no longer available online, despite the fact that they had access to their data in the original consultation. However, they pointed out that the volume of production of these is not relevant with respect to the total produced by the rest of the producing companies.

84. With regard to the reasonableness of prices in determining the normal value, they analyzed the number of employees that the manufacturing companies have, identified the years of experience, specialized services in the production and processing of screws.

85. As a result of the foregoing, they stated that the companies from which the prices were obtained to calculate the normal value have extensive experience in the production and marketing of steel screws or threaded bolts within the domestic market of China. They presented screenshots of the companies' profiles.

86. Based on the review of the quotations and the calculation of the normal value presented, the Secretariat instructed the Applicants to explain the units of measurement observed in the price references and how they determined the price in dollars per kilogram, as well as to submit the quotations of the prices identified in the calculation without documentary support and the justification for the use of the prices reported by quotation, as indicated in point 19 of this Determination.

87. In response, the Applicants indicated that the prices refer to general prices reported by the supplier companies, specifically from the 1688 and Love Procurement platforms, established for a minimum quantity so that the purchase can be made through them. They presented information with the screenshots of the platforms.

88. The United States explained that the Chinese companies report a general price, and that, from certain quantities, a wholesale price is offered, so they considered the totality of the prices in the quotations submitted to calculate the normal value.

89. They added that, for the prices that reported an amount for several units, the unit price per piece was obtained, dividing the price by the volume that they converted to kilograms through the conversion factors described in points 73 and 74 of this Determination.

90. For the price references by "game" and without information related to weight, they presented a methodology for reporting prices in kilograms. They added that the websites from which they obtained the prices are not currently available for consultation.

91. With respect to the prices considered in the calculation of the normal value without documentary support, the Applicants submitted the corresponding quotations. They pointed out that prices have not changed from the period under investigation to date, so they are consistent with those obtained by the consulting company in the Price Study.

92. With respect to the information provided to obtain the conversion factor from pieces to kilograms, the Ministry instructed the Applicants to submit the documentary support supporting the conversion factor obtained from the Internet pages of the companies of which they indicated that they report the specific weight of the screws; the explanation of the calculations made that demonstrate the traceability of the conversion factor; clarify some of the terms reported in the columns and cells used for the calculation; and to provide the conversion factor again with the comments addressed, as described in point 19 of this Determination.

93. In response, the Requestors again provided the annex with the fully formulated conversion factor calculation. In addition, they provided a detailed explanation of how they obtained the weight of the screws used for the calculation of the conversion of parts to kilograms, according to the weights per piece and provided a table with all the weights of the screws used to determine the conversion of parts to kilograms.

94. With respect to the exchange rate, the Ministry instructed the Applicants to submit the exchange rate information from an official source in the country of the merchandise under investigation. The Applicants provided the Central Bank of China exchange rate, which they obtained from the <http://www.pbc.gov.cn/rmyh/108976/109428/index.html#> website, as indicated in paragraph 19 of this Determination.

95. Derived from the analysis of the information provided by the Applicants, the Ministry considered that the price references correspond to the product and the country under investigation, since they belong to Chinese manufacturers and come from updated sources of information.

96. The Ministry calculated the normal value with price references of eight companies, for which it observed that information on their business was available, and did not consider the prices for which it did not have the documentary support of the units in which the prices were reported, for example "games".

97. It also considered the methodology proposed by the Applicants with respect to the conversion factor to obtain prices per kilogram, using the weights per screw information of the companies where it obtained information, as well as the weight based on the Applicants' own information. To convert prices from RMB to dollars, he used the exchange rate on the website of the Central Bank of China <http://www.pbc.gov.cn/rmyh/108976/109428/index.html>.

b. Determination

98. In accordance with Articles 2.1 of the *Antidumping* Agreement, 31 of the FTA, and 40 and 58 of the RLCE, the Ministry calculated a normal value of steel screws or threaded bolts in dollars per kilogram for the period of investigation. To do so, it considered the price references of eight of the 16 companies presented in the Price Study, and the calculation methodology provided by the Applicants.

c. Adjustments to normal value

99. Clavos México and Clavos C.N. stated that in the Price Study the references reported are at the ex-factory level. However, they proposed adjusting the normal value for sales, specifically for marketing margin.

i Marketing margin

100. The Applicants pointed out that platform 1688 charges two fees for the sale of products: i) for the use of the distribution platform, and ii) for technical service of the page. They explained that it applies a deduction of 2% and 5% on the amount for each transaction. They presented the information on the fees for each concept that they obtained from the platform's website.

101. With respect to the Love Procurement platform, they indicated that, after searching for the conditions of the sales rate within the platform, they did not find that it makes any charge, so they determined not to apply any adjustment to the price references from this source.

102. The Secretariat, for its part, consulted the website of platform 1688, and corroborated the existence of the two rates adjusted to normal value and the percentages applicable to the product under investigation.

d. Determination

103. In accordance with Articles 2.4 of the *Antidumping* Agreement, 36 of the FTA, 53 and 54 of the RLCE, the Ministry adjusted the normal value for the use of the distribution platform and for technical service for the prices of the 1688 platform, taking into account the information and methodology provided by the Applicants.

3. Price discrimination margin

104. On the basis of the information and methodology described above, and based on Articles 2.1, 2.4, 2.4.2 of the Antidumping Agreement, 30 of the FTA, and 38 and 40 of the RLCE, the Ministry compared the export price with the normal value and obtained a margin of price discrimination for imports of steel screws or threaded bolts originating in China for the period of investigation in excess of the *de minimis* period of investigation.

G. Injury and causation analysis

105. The Ministry analyzed the arguments and evidence provided by Clavos México and Clavos C.N., in order to determine whether there is sufficient evidence to support that imports of steel screws or threaded bolts originating in China, carried out under alleged conditions of price discrimination, caused material injury to the domestic industry of the like product. This assessment, among other elements, includes an examination of:

- to. The volume of imports under alleged conditions of *dumping*, their price and their effect on domestic prices of the domestically manufactured like product.
- b. The impact of the volume and price of these imports on the economic and financial indicators of the domestic industry of the like product.

106. The analysis of the economic and financial indicators of the domestic industry includes the information provided by Clavos México and Clavos C.N. that constitute the domestic industry of steel screws or threaded bolts similar to the product under investigation, as determined in paragraph 131 of this Determination.

107. To this end, the Secretariat considered data from the following periods:

Period analyzed		
January 2022 - December 2024		
Period 1	Period 2	Period under investigation
January – December 2022	January – December 2023	January - December 2024

108. Unless otherwise indicated, the performance of economic and financial indicators in a given year or period is analysed in relation to the immediately preceding comparable year.

1. Product similarity

109. In accordance with the provisions of Article 2.6 of the *Antidumping Agreement*, and Article 37(II) of the RLCE, the Ministry evaluated the information and evidence in the administrative record submitted by Clavos México and Clavos C.N., to determine whether domestically manufactured steel screws or threaded bolts are similar to the product under investigation.

110. To establish that the product under investigation and the domestically produced product are like, the Applicants provided the following:

- to.** For the product under investigation: table with the main types, shapes and appearances of the product under investigation, including the addresses of the Internet pages; catalogues of the investigated product of the Chinese companies Jiashan East-Sun Imp. & Exp. Co., Ltd., Haiyan Power Fastener Co., Ltd. and Hangzhou Lizhan Hardware Co., Ltd.; Screenshots of steel bolts and bolts from Chinese companies Guandong Yueluo Hardware Industrial Co., Ltd., Hebei Pu Li Meng Fastener Shop Fastener, Jinshunxin Industrial Technology Co., Ltd., Hebei Jiawei Fastener Manufacturing Co., Ltd., Wenzhou Xiaoxiao Standard Parts Co., Ltd. Handan Market Jite Metal Products Co., Ltd., Dongguan Woluot Hardware Products Co., Ltd., Suzhou Kangshi Hongye Precision Hardware Co., Ltd., Handan Jinze Fastener Manufacturing Co., Ltd., Hebei Shenzhu Metal Products Co., Ltd., Shenzhen Hongyu Hardware Products Co., Ltd., and Shenzhen Fulongda Hardware Products Co., Ltd.; description of the stages of the production process; diagrams of production processes of the Chinese companies Shanghai Monsun Technology Co., Ltd. and Panda Fasteners obtained from the Internet pages <https://monsun021.en.made-in-china.com/product/jwQAmGLTJCWi/China-Hex-Head-Tek-SDS-Fasteners-Hardware-Self-Drilling-Screws-for-Sheet-Metal-to-Metal-Made-in-China.html> and <https://www.pandafastener.com/screw-production-process-and-technology.html>; videos with screw production processes in China from the company Shenzhen Fulongda Hardware Products Co., Ltd. from the Internet pages <https://www.youtube.com/watch?v=WJvQZko8uiU>, <https://cloud.video.taobao.com/play/u/2647184926/p/2/e/6/t/1/450927274794.mp4> and https://cai yuanbao.alicdn.com/avpl/community/copy/018d-e0a80ae3-a1bf4fb1-8dc06b52-4730/20221217_34f3a4e6942e9727_392017395839_mp4_264_id_taobao.mp4?auth_key=1753488863-0-0-1d1a556dc6f2e9f4cddad8f6136b6c1&biz=community-6d58260ccb5ee45d&t=2107d64617534861631964470e114f&t=2107d64617534861631964470e114f&b=community&p=cloudvideo_http_cbu_jihuohui; sales invoice from one of the importers of the product under investigation during the period under investigation and a certificate of quality; as well as SAE-J429 standards, ASTM A29/A29M-23, ASTM A307-21, ASTM F3125/F3125M-25, ASTM A193/A193M-25, ASTM A354-17e2, ASTM A394-08(2024), ASTM B633-23, ASTM F2329/F2329M-15(2023), ASTM A153/A153M-23, ASTM A449-14(2020), ASME B18.2.1-2012 (R2021), ASME B18.2.6-2019, and ASME B1.1-2024.
- b.** For like domestic product: table with the main types and appearances of the domestically manufactured product; catalogs of the Applicants' domestic like product, including images, technical specifications, and standards; a comparative table with the main characteristics of the product under investigation and the similar product of national manufacture; images of the like domestic product; a list of standards that indicate the physical specifications, dimensions and tolerances (of common commercial use and acceptance); description of the stages of the production process; diagram of the production process of the Applicants; as well as SAE-J429 standards, ASTM A29/A29M-23, ASTM A307-21, ASTM F3125/F3125M-25, ASTM A193/A193M-25, ASTM A354-17e2, ASTM A394-08(2024), ASME B18.2.1-2012 (R2021), ASME B18.2.6-2019, and ASME B1.1-2024.

111. The Ministry analyzed the evidence provided by Clavos C.N. and Clavos México to establish the similarity between the steel screws or threaded bolts under investigation and the similar domestically manufactured steel bolts, and determined that there are sufficient elements to consider, initially, that they are similar, as follows:

- to.** According to the comparative table of the product under investigation and the domestic manufactured product, the Chinese and domestic product catalogs, the screenshots of steel screws and bolts offered by Chinese companies, as well as the standards provided, both have the same generic and commercial name, characteristics, uses and standards.

- b. According to the information in the bill of sale of steel screws or threaded bolts, the quality certificate, the diagram of the Chinese and national production process, the videos of the production process of Chinese product that are manufactured from low, medium or high carbon steel wire rod and alloy steels, the main input of the product under investigation, Chinese and similar domestically manufactured screws use manufacturing machinery and processes consisting of similar stages.
- c. According to the sales to customers of Clavos C.N. and Clavos México and the list of imports of the Balance of Trade, it was observed that 69 customers of the Applicants imported steel screws or threaded bolts originating in China. In addition, the Ministry conducted an Internet search, which allowed it to corroborate that these companies belong to industries that use the product under investigation, such as construction, furniture manufacturing, electrical and domestic sectors, among others. In this way, he observed that they serve similar consumers.
- d. With respect to the standards indicated for the investigated and domestic product, as well as the information in the administrative record, the Ministry did not observe elements that indicate that they are mandatory for manufacturers of steel screws or threaded bolts in China and Mexico, such that they can be considered determinative for the purposes of proving the similarity between the investigated product and the domestic product. In any case, they could be considered to be indicative but not limiting of the properties of the product under investigation and national.

to. Characteristics

112. The domestically manufactured product and the product imported from China have characteristics similar to those indicated in points 5 to 7 of this Determination, as follows:

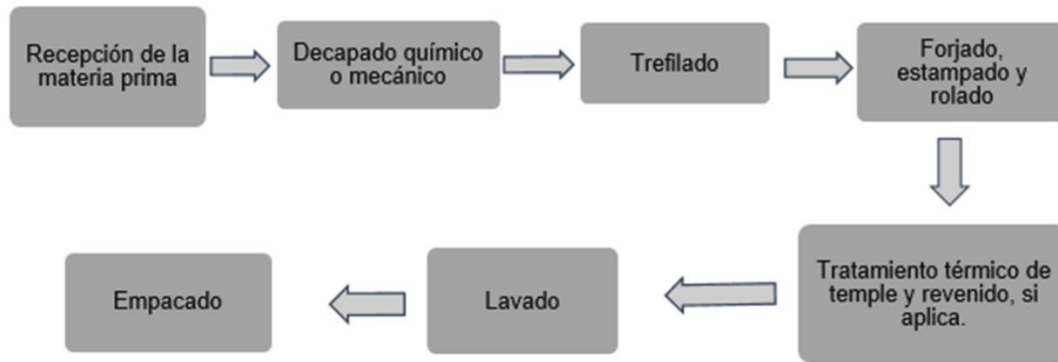

- to. The product similar to the product under investigation is steel threaded screws or bolts with a diameter ranging from 3.175 mm or 1/8 inch and up to 50.8 mm or 2 inches and a length equal to or greater than 6.35 mm or 1/4 inch.
- b. Steel threaded screws or bolts are a cylindrical piece of steel with a spiral protrusion that allows it to be threaded in order to hold parts in place. It is made up of a head that can be round, hexagonal, square, flat, smooth, grooved or any other shape, whose body is a partially or totally threaded shank.
- c. Due to applications and uses, screws can have a hole at any point on the body or head, as well as a modification or adaptation along the body, either a notch or groove.
- d. They can have a steel-colored finish or appearance (*Plain*), black, yellowish or tropicalized electrolytic, electroplated electroplated galvanized, chrome electroplated electroplated galvanized and hot-dipped galvanized. Depending on the type of screw finish they can have a black, yellowish, chrome or silver appearance.
- and. Its main component is low carbon steel, medium carbon steel, high carbon steel and alloy steel, either heat treated or non-heat treated, which allows it to give the hardness to the screw or bolt.
- f. Domestically manufactured steel screws or threaded bolts may generally have a string *UN, UNC, UNS, UNF and CLASS 2A*.

b. Production process

113. Similar domestically manufactured steel screws or threaded bolts are manufactured with inputs and production processes similar to the steel screws or threaded bolts under investigation, as described in paragraphs 12, 13 and 14 of this Determination:

- to. The main input of the domestically manufactured product is low, medium or high carbon steel wire rod and alloy steels. Other inputs used in the production of screws are electrical energy, machinery, dies, dies for drawing wires, dies for forging, hardening furnaces, rollers or combs, lubricating oil, degreaser, sulfuric acid, boric acid, zinc phosphate and calcium hydroxide.
- b. In the manufacture of the similar product, specialized machinery is used with the capacity to produce screws of various types, calibers and lengths.
- c. The stages of the production process are as follows: i) reception of raw materials; (ii) chemical or mechanical pickling to remove the scale by sulphuric acid; ii) a special lubricant for forging such as phosphate and borax is adhered; iii) wire drawing by means of dies until the diameter required for forging is reached, during the forging process the screw is stamped and shaped by means of blows at different stations of the machine; (iv) thread rolling by means of press-on rollers to form the rope; (v) heat treatment, which consists of heating the screw by means of special furnaces to achieve the desired strength and hardness; vi) the screws are washed with water to remove impurities, such as grease and sludge that are acquired during the process; and (vii) packaged as a finished product.

Production Process of Steel Threaded Bolts or Screws

Source: Information from Clavos C.N. and Clavos México, which is in the administrative file.

c. Standards

114. The Petitioners indicated that similar domestically manufactured steel screws or threaded bolts are produced under norms and standards that indicate the physical specifications, dimensions and tolerances, of common commercial use and acceptance, described in point 15 of this Determination.

d. Uses and Functions

115. According to the information available in the administrative file, the Ministry had sufficient evidence to support the fact that both the product under investigation and the domestically manufactured product have the same uses as indicated in paragraph 17 of this Determination, since both are used as fasteners, mainly in the construction industries. manufacture of furniture, electrical and electronic appliances, and in a small proportion in the domestic sector. In general, the product under investigation is used in practically all industries, they are basically consumer goods and are used as fasteners in a number of products and goods of common use, so they can be used as an input.

and. Consumers and distribution channels

116. The Applicants noted that there is no specific geographic market for the product under investigation or the similar domestically manufactured product. The consumers of the steel screws or threaded bolts under investigation and those manufactured domestically are hardware stores, construction companies, as well as people who require this type of product.

117. In accordance with the provisions of paragraph 111(c) of this Determination, 69 customers of the Applicants were identified as importing the product under investigation during the period under review. These companies are located in the construction, electrical, hardware, tlapalero, metalworking, household and furniture manufacturing industries. Thus, this Ministry observed that the consumers or end users of the product under investigation coincide with those of the domestically manufactured product.

118. The foregoing allows us to presume that steel screws or bolts of Chinese origin and those of domestic manufacture are intended for the same consumers and markets, which allows them to be commercially interchangeable.

f. Determination

119. Based on what is described in paragraphs 109 to 117 of this Determination, the Ministry had sufficient information to determine, initially, that domestically manufactured steel screws or threaded bolts are similar to the product under investigation, since they have similar characteristics, are manufactured with the same inputs and through production processes that do not show substantial differences. They also serve the same markets and consumers, which allows them to fulfill the same functions and be commercially interchangeable. Thus, they can be considered similar, in accordance with Articles 2.6 of the *Antidumping Agreement*, and 37, section II of the RLCE.

2. Domestic Industry and Representativeness

120. Pursuant to Articles 4.1 and 5.4 of the *Antidumping Agreement*, 40 and 50 of the FTA, and 60, 61 and 62 of the RLCE, the Ministry identified the domestic industry of the like product under investigation as the domestic producers whose collective production constitutes a major proportion of the total domestic production of steel screws or threaded bolts, taking into account whether the manufacturing companies are importers of

the product under investigation or if there are elements to presume that they are linked to companies importing or exporting the same.

121. With respect to the composition of the domestic like product industry of domestic manufacture, representativeness and support for this investigation, the Applicants noted the following:

- to.** The manufacturing industry of the similar national product is made up of eight producing companies, including the Applicants themselves and six more manufacturers: Apisaf Fasteners; Beneficiadora de Alambres y Metales, S.A. de C.V., hereinafter Beneficiadora de Alambres y Metales; Forjadora Panamericana; JM Tor Par, S.A. de C.V., hereinafter JM Tor Par; Reyca Industrial, S.A. de C.V., hereinafter Reyca Industrial; and Tormex, S.A. de C.V., hereinafter Tormex.
- b.** Five companies support this investigation: Apisaf Fasteners, Beneficiadora de Alambres y Metales, JM Tor Par, Reyca Industrial and Tormex, which, together with the Applicants, represent 93% of the national production in the period investigated.
- c.** In the case of Forjadora Panamericana, they do not have information about their support for the investigation request.
- d.** Clavos C.N. is affiliated with ANFHER.

122. To substantiate the foregoing, the Applicants provided the following information:

- to.** Letter from ANFHER dated April 28, 2025, indicating that the association is aware of eight companies as the sole manufacturers of the product under investigation in the period from 2022 to 2024: Clavos C.N. y Clavos México, Apisaf Fasteners, Beneficiadora de Alambres y Metales, Forjadora Panamericana, JM Tor Par, Reyca Industrial and Tormex.
- b.** Letters from five companies expressing their support for this investigation: Apisaf Fasteners, Beneficiadora de Alambres y Metales, JM Tor Par, Reyca Industrial and Tormex, from November 2024 and January 2025, which include their production figures and installed capacity.
- c.** To prove the 93% support for the request for this investigation, the Applicants provided the production figures for the period under investigation of Clavos C.N., as well as of the companies Apisaf Fasteners, Beneficiadora de Alambres y Metales, Forjadora Panamericana, JM Tor Par, Reyca Industrial and Tormex. In the case of Clavos México, they did not report production figures for the period under investigation. In addition, the Applicants indicated that, through the execution of confidentiality agreements, they obtained for the period analyzed the production figures and other indicators of the five companies that support this investigation.
- d.** Confidentiality agreements, through which the national production companies that are not parties to this proceeding, shared with the Applicants their production figures, installed capacity and other indicators for the calculation of national production.

123. The Ministry reviewed the information provided by the Applicants and noted the following: (i) some letters of support were issued in 2024, i.e., before the end of the period defined as under investigation, or did not indicate the period of the production figures or differed from the production figures for the period under review submitted for each company; ii) Clavos México only reported production figures for 2022 and 2023; and (iii) the production figure of the company Forjadora Panamericana for the period under investigation was obtained through an estimate by the Applicants. However, they did not provide the corresponding methodology.

124. In accordance with the foregoing, the Secretariat considered it appropriate to provide more information in the following terms:

- to.** It instructed the Applicants to update the letters of support, confirm or correct the production figures and other indicators for the period investigated and analyzed, as well as the methodology by which they estimated the production figures of the Forjadora Panamericana company, as indicated in point 19 of this Determination.
- b.** The companies Apisaf Fasteners and Forjadora Panamericana were required to provide their figures for production, sales, installed capacity and imports, and technical data sheets of similar products manufactured domestically. In addition, Forjadora Panamericana to state its position regarding the initiation of this investigation, as indicated in point 20 of this Determination.

125. The companies Apisaf Fasteners and Forjadora Panamericana did not submit their response to the request for information indicated in the immediately preceding point of this Determination. For their part, the Requestors provided the following:

- to.** Letters of support for this investigation updated as of June 2025, for the five companies: Apisaf Fasteners, Beneficiadora de Alambres y Metales, JM Tor Par, Reyca Industrial and Tormex.

- b. Regarding the production of the Forjadora Panamericana company, they indicated that they estimated that it had a 7% share of total national production throughout the period analyzed. To that end, they considered their own production figures and those of the other companies that make up the national production, as well as the market presence of that company's products.

126. Based on the information in the administrative record, and considering that it is the best information available at this stage of the investigation, the Ministry estimated the domestic production of the like product based on the Applicants' production figures, the production figures provided by Clavos C.N. and Clavos México of the companies in the letters of support, as well as the estimate of the 7% participation of the company Forjadora Panamericana in national production, for the period analyzed, a company for which no information was available despite having been requested.

127. On the basis of the above, the Ministry noted that the Applicants had a 47% share of the domestic production of the like product in the period analyzed, while the companies supporting the request for investigation contributed 46% in the same period. Taking into account the above, it is considered that this research has an estimated support of at least 93% of total national production.

128. On the other hand, the Petitioners pointed out that Clavos México imported the product under investigation, which were negligible in relation to imports originating in China, with a share of less than 1% in the period under investigation. They also indicated that their imports declined during the period under review and that they are not related to or related to any exporter or importer of the product under investigation.

129. In this regard, the Ministry requested further information from the Applicants regarding their imports of the product under investigation. In response, they pointed out that Clavos México imported the product under investigation with the aim of proving its potential for sale within the domestic market. From the sales of the imported product, they noticed its relevance within the domestic market and made the decision to replace their imports with products of their own manufacture.

130. According to the review of the basis of the import statistics of the Balance of Trade, corresponding to the tariff headings of the TIGIE through which the product under investigation enters, the Ministry observed that Clavos C.N., Clavos México and JM Tor Par, imported the product under investigation during the period analyzed, but in insignificant volumes. Taken together, its imports accounted for less than 2% of the total volume of imports under investigation. The foregoing allows us to consider that the imports made by the domestic producers were marginal, and therefore did not influence the behavior of the imports under investigation.

131. Considering the above information and results, the Ministry initially determined that Clavos México and Clavos C.N. are representative of the domestic production of steel screws or threaded bolts, and make up the domestic industry of the merchandise similar to that under investigation, since they together produced 47% of the total domestic production in the period analyzed. Likewise, the request for investigation is supported by 93% of the total domestic production, in accordance with the provisions of Articles 4.1 and 5.4 of the *Antidumping Agreement*, 40 and 50 of the LCE, and 60, 61 and 62 of the RLCE. In addition, the Ministry did not have any evidence to indicate that the Petitioners are related to any importer or exporter of the product under investigation, and although they imported steel screws or threaded bolts originating in China during the period analyzed, these were negligible and could not therefore be considered as the cause of the alleged injury.

3. International market

132. With regard to the international market performance of the product under investigation, the Applicants indicated that they do not have information from the producing countries at the world level. However, the United States indicated that it is known to it that the main producer of the product under investigation is China. They also submitted information from 12 Chinese companies that manufacture steel screws or threaded bolts (Jinshunxin Industrial Technology Co., Ltd., Hebei Jiewei Fastener Manufacturing Co., Ltd., Wenzhou Xiaoxiao Standard Parts Co., Ltd., Hebei Shenzhu Metal Products Co., Ltd., Shenzhen Hongyu Hardware Products Co., Ltd., Shenzhen Fulongda Hardware Products Co., Ltd., Suzhou Kangshi Hongye Precision Hardware Co., Ltd., Hebei Pu Li Meng Bra Store, Hebei Fengling Fastener Manufacturing Co., Ltd., Hebei Mailuo Fastener Manufacturing Co., Ltd., Handan Jianair Fastener Technology Co., Ltd., and Guangdong Yueluo Industrial Hardware Co., Ltd.), which includes figures of their annual output. In accordance with the above, they considered that the domestic production of the like product in the period under investigation is lower than the production of the aforementioned 12 companies.

133. With regard to consumer countries, they indicated that they also did not have information on steel screws or threaded bolts. However, it is valid to consider that the main importers could also be the main consumers.

134. With respect to the exporting and importing countries of the product under investigation, the Petitioners submitted Trade Map data for tariff subheading 7318.15 of the Harmonized System of the World Customs Organization, hereinafter WCO, in which the product under investigation is classified. According to this information, the Requestors noted that the main exporting countries in 2024 were China, Taiwan, Germany, Italy, the United States, and the Netherlands, while the main importers were Mozambique, Canada, the United States, the Netherlands, Germany, and France.

135. For its part, the Secretariat obtained the export and import statistics from Trade Map under WCO subheading 7318.15 for the period 2022 to 2024, from which it observed the following:

- to.** World exports decreased 2% in the period analyzed, going from 5.5 to 5.4 million tons. In the period under investigation, the main exporters were China with a share of 38%, Taiwan with 12%, Germany with 8%, the United States with 7% and Italy with 6%.
- b.** World imports fell 12% in the period analyzed, going from 8.9 to 7.8 million tons. In the period under investigation, the main importing countries were Australia with 21%, Canada with 14%, the United States with 11%, Germany with 6%, Mexico with 4% and the Netherlands with 3%.

4. Domestic market

136. According to the information in the administrative file, the national supply of steel screws or threaded bolts during the period under review came from Clavos C.N., Clavos México, Apisaf Fasteners, Beneficiadora de Alambres y Metales, Forjadora Panamericana, JM Tor Par, Reyca Industrial and Tormex, while the main consumers are the construction industries, manufacture of furniture, electrical and electronic appliances and, in a small proportion, the domestic sector.

137. The Ministry evaluated the behavior of the domestic market for steel screws or threaded bolts, based on the information on the production and exports of the companies that comprise the domestic production, and on the imports of the product under investigation obtained from the list of imports of the Balance of Trade for the period analyzed. in accordance with the provisions of point 146 of this Determination.

138. Based on the information indicated in the immediately preceding point, the Ministry observed that the domestic market for steel screws or threaded bolts, measured through Apparent National Consumption, hereinafter CNA, calculated as domestic production plus imports minus exports, showed a contraction in the period analyzed, since although it increased by 8% in 2023, in the period under investigation it fell 21%, which represented a decrease of 15% in the period analyzed. Regarding the components of the CNA, they showed the following behavior:

- to.** Domestic production registered a decreasing behavior, with a reduction of 0.3% in 2023 and 14% in both the period under investigation and in the period analyzed, respectively.
- b.** National exports contracted 44% in the period analyzed, derived from a drop of 43% and 1% in 2023 and in the period investigated, respectively. In relation to national production, they had an average participation of 8% during the period analyzed.
- c.** Although total imports increased 8% in 2023, they decreased 22% in the period under investigation and 15% in the period analyzed. The supply of the imported product came from 162 countries during the period analyzed. In the period under investigation, the main origin of imports was China with a share of 70%, followed by the United States with 12%, Taiwan with 9%, Korea with 3%, Germany with 1.2% and Vietnam with 0.9%.

139. For its part, Domestic Production Oriented to the Domestic Market, hereinafter PNOMI, calculated as domestic production minus exports, decreased by 11% in the period under review as a result of an increase of 5% in 2023 and a decrease of 15% in the period under investigation.

5. Analysis of imports

140. In accordance with the provisions of Articles 3.1 and 3.2 of the *Antidumping Agreement*, 41, section I of the FTA, and 64, section I of the RLCE, the Ministry evaluated the behavior and trend of imports of the product under investigation during the period analyzed, both in absolute terms and in relation to domestic production or consumption.

141. The Petitioners indicated that during the period under review, the product under investigation entered through tariff headings 7318.15.04, NICO 00 and 7318.15.99, NICO 04, 05, 06, 07, 08 and 99, corresponding to

the definitive import regime. They also pointed out that through these tariff headings also entered various products with characteristics different from the product under investigation that, therefore, should not be considered in the analysis, such as unthreaded bolts, studs, sockets, *Allen* screws, stainless screws, headless screws, steel rods and threaded rods.

142. In order to obtain the subject imports, the Applicants submitted an import database provided to ANFHER through ANAM, in accordance with the Customs Control and Inspection Program by Industrial Sector, corresponding to the period from 2022 to 2024. They also provided the methodology used to identify the transactions corresponding to the product under investigation and exclude those transactions that corresponded to products other than the one under investigation.

143. In this regard, the Secretariat reviewed ANFHER's import base and the import clearance methodology provided by the Applicants, and noted that the clearance of the import base was based on the following criteria:

- to.** Identify the transactions whose description corresponds to the product under investigation or to different products, for which they excluded those transactions that refer to goods whose description indicates a product other than a steel screw or threaded bolt, as well as those in which the screw does not meet the definition of the product under investigation, or, it is found in combination with other items, such as washers, nuts and washers, among others.
- b.** Identification by commercial line of the importer, for which they excluded import operations carried out by companies belonging to the automotive and aerospace sectors.
- c.** Exclude import operations from regimes with declaration codes A4, AD, AF, BA, BC, BH, BO, D1, F2, H1, IN, K1, M3, P1, V1, V5, I1, M4, as well as operations that originate in Mexico.

144. In accordance with the foregoing, the Secretariat observed some inconsistencies in the application of the criteria indicated and the operations selected as the product under investigation, and therefore cautioned the Applicants to provide more information regarding the methodology applied with respect to the following: transactions whose description suggests that they are not investigated products, but that were included; transactions whose description indicates that they could correspond to the product under investigation, but which were excluded; transactions whose description does not allow it to be clearly determined whether or not it is the product under investigation; and import operations carried out by companies in the automotive and aerospace sectors that were not excluded, as indicated in point 19 of this Determination.

145. In response to the caution, the Petitioners clarified that import transactions whose description includes other items, such as washers, nuts or washers, should be considered as non-subject merchandise. In addition, in relation to companies in the automotive and aerospace sectors, the Applicants expanded the list of companies belonging to these industries that should be excluded from the investigation.

146. The Secretariat reviewed the information provided by the Applicants and found it to be acceptable as it is based on objective elements such as the product description, the line of business or sector of the importing companies, and the final customs regime. In view of the foregoing, the Secretariat replicated the purification methodology proposed by the Applicants, using the list of import operations of the Trade Balance, as indicated in point 32 of this Determination. It also includes, among other elements, the volume, value and description of the product imported in each operation. Considering the above, the Ministry obtained the volume and value of imports of steel screws or threaded bolts originating in China and other countries.

147. The Petitioners indicated that they have been affected by the enormous entry and presence of the product under investigation under *dumped* conditions, by virtue of the following: subject imports are the main origin of imports of steel screws or threaded bolts in Mexico, increasing their share during the period analyzed; they registered an increase in their share of total imports going from 62% in 2022 to 64% in the period investigated; Chinese imports increased their share in the CNA and in domestic consumption throughout the period analyzed; Although Chinese imports fell 9% in the period analyzed, in the period under investigation they increased 3% compared to 2023; and subject product imports displaced imports from other origins.

148. Considering the information described in paragraph 146 of this Determination, the Ministry observed that total imports of steel screws or threaded bolts grew 8% in 2023, but decreased 22% in the period under investigation, representing a cumulative drop of 15% in the period analyzed.

149. Imports originating in China increased by 10% in 2023 and decreased by 16% during the period under investigation, which represented a drop of 8% in the period analyzed. However, the relative contribution of

Chinese imports in the total imported increased by 5.9 percentage points in the period analyzed, from 64.2% in 2022 to 70.1% in the period investigated.

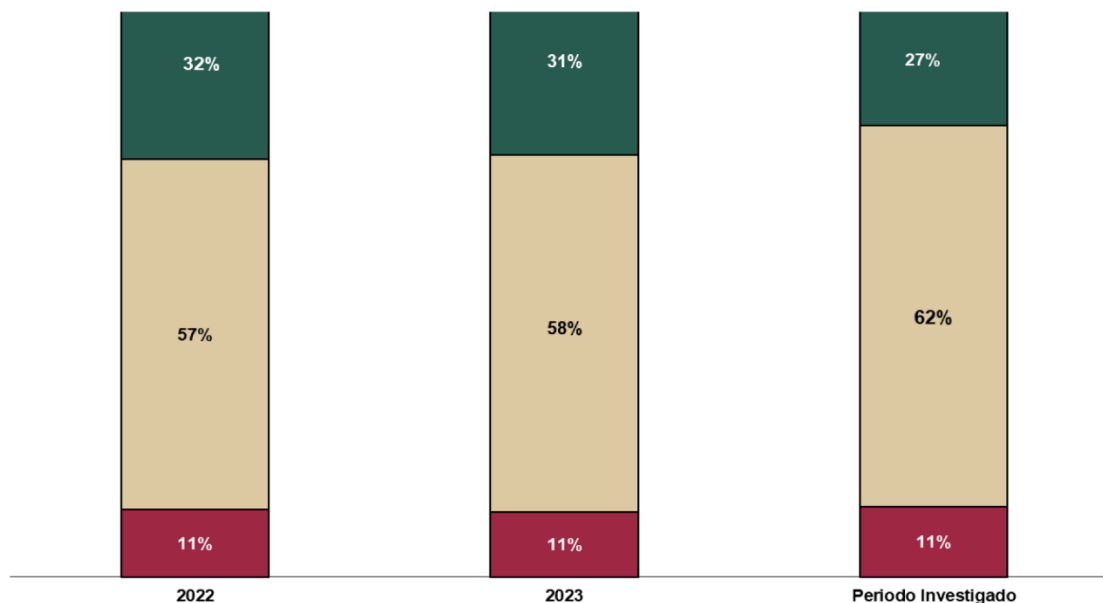

150. Imports from other countries followed a similar behavior, registering an increase of 6% in 2023 and a decrease of 33% during the period under investigation, which represented a cumulative drop of 29% in the period analyzed. This was reflected in a drop in its contribution to the total imported, going from 35.8% in 2022 to 29.9% in the period investigated.

151. In relation to the domestic market, the imports under investigation increased their share, going from a contribution in the CNA of 57% in 2022 to 58% in 2023 and 62% in the period under investigation, which meant an increase of 5 percentage points in the period analyzed. In contrast, imports from other origins decreased their contribution to the CNA from 32% in 2022 to 31% in 2023, and 27% in the period under investigation, which represented a drop of 5 percentage points in the period analyzed.

152. As for the contribution of the PNOMI in the CNA, it remained constant throughout the period under review at 11%. In this regard, the Ministry considers that, although domestic production managed to maintain its market share against the imports under investigation during the period analyzed, this would be associated with the decrease in the sales price to the domestic market, mainly in the period under investigation, which is reasonable in the face of competition from Chinese products under alleged *dumping* conditions and significant levels of undervaluation. However, this had an impact on the financial results of the like product (revenues, profits and operating margin), as indicated in point 203 of this Determination.

Domestic market for steel threaded bolts

(2022–2024)

Source: Prepared by the Secretariat with information from the Applicants in the administrative file and in the Balance of Trade.

153. For its part, the contribution in the CNA of Production Oriented to the Domestic Market of the domestic industry, hereinafter POMI, registered shares of 6% in 2022 and 2023, respectively, while in the investigated it was 5%. This reflected a drop in its participation of 1 percentage point in the period analyzed.

154. The Ministry noted that, although the imports under investigation increased their contribution to the domestic market by 5 percentage points during the period analyzed, the greatest impact was observed in relation to domestic production, where the relative increase in imports was significantly higher (37 percentage points), while those of the rest of the countries decreased by 46 percentage points. Indeed:

- to.** Imports under investigation were 3.7 times higher than domestic production in 2022, 4.2 times in 2023 and 4.1 times in the period under investigation, which meant an increase of 37 percentage points in the period analyzed.
- b.** Imports from other origins were above domestic production 1.6 times in 2022, 1.8 times in 2023 and 1.2 times in the period under investigation, which meant a decrease of 46 percentage points in the period analyzed.

155. The Ministry considers that the above results show that imports of the product under investigation registered a growth in relation to the domestic market during the period analyzed, but particularly and significantly in relation to domestic production. The foregoing occurs in a context in which, although the domestic market contracted in the period analyzed, this did not have an equivalent impact on all market participants, since Chinese imports did not decrease their contribution, but increased it to the detriment of the other suppliers. In the case of domestic production and industry production, their contribution to the market was suppressed, given the significant presence of the subject imports under alleged *dumping*, which caused a financial impact on the domestic industry, resulting from declining its prices without being able to compensate for the undercutting of the product under investigation and loss of sales and revenue.

156. Based on the analysis described in paragraphs 140 to 155 of this Determination, the Ministry determined, initially, that imports of steel screws or threaded bolts originating in China increased their contribution to the domestic market, and significantly to domestic production during the period under review, which includes the investigated. This indicates the possible existence of a displacement of the domestically produced product caused by the subject imports under alleged *dumping*. The foregoing occurred in a context of contraction of the CNA and of national production, and particularly in the period under investigation. Such behavior would be associated with the decrease in the price of the imports under investigation and the conditions of undercutting in which they arose during the period analyzed, as indicated in paragraphs 160 and 163 of this Determination.

6. Effects on prices

157. Based on the provisions of Articles 3.1 and 3.2 of the *Antidumping Agreement*, 41, section II of the FTA, and 64, section II of the RLCE, the Ministry analyzed whether the imports under investigation entered the domestic market at prices considerably lower than those of the like domestic product, or whether the effect of these imports was to depress domestic prices or prevent the increase that, otherwise, it would have occurred, and whether the price level of imports was decisive in explaining their behavior in the domestic market.

158. The Applicants indicated that, during the period under review, the price of subject imports showed a downward trend that caused it to be below the domestic sales price. The low prices of dumped Chinese imports caused the Petitioners to reduce their prices, which had a direct impact on the reduction of the domestic industry's profits.

159. For the purpose of conducting an analysis of the behavior of the prices of the product under investigation, the Ministry considered the information contained in the administrative file corresponding to the sales to the domestic market made by the domestic industry, as well as the volumes and values of imports obtained from the Balance of Trade, as described in paragraph 146 of this Determination. On the basis of the above, it calculated the average implicit prices of subject imports and of the rest of the countries, expressed in dollars.

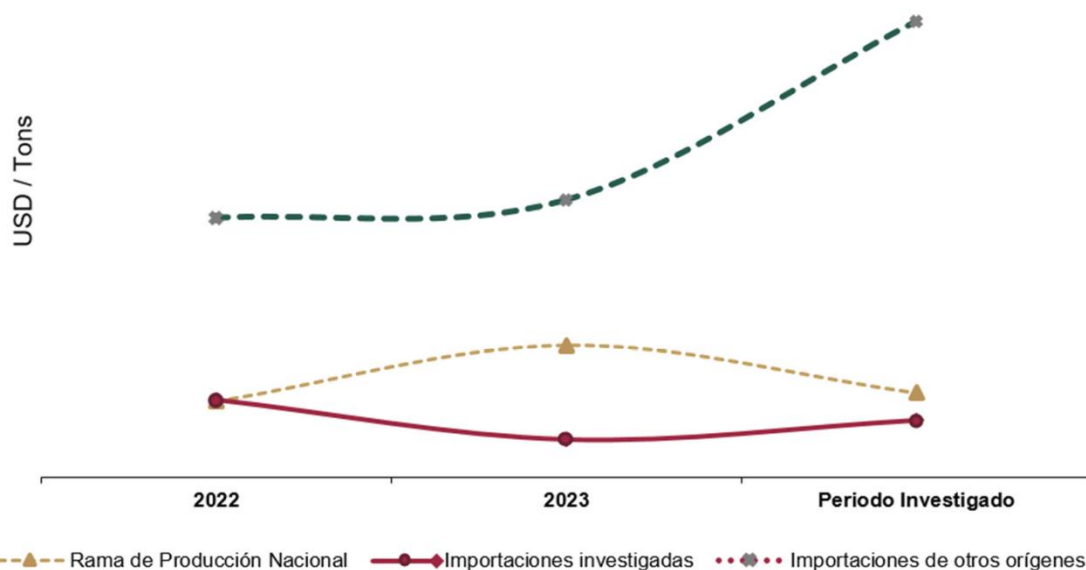

160. Based on the foregoing information, the Ministry observed that the average implicit price of the imports under investigation decreased by 29% in the period analyzed, as a result of decreases of 24% and 6% in 2023 and in the period under investigation, respectively. The price of imports from other origins decreased by 1% in 2023, but increased by 29% in the period under investigation and by 28% in the period under review.

161. The domestic industry's average sales price, measured in dollars, increased by 26% in 2023 and decreased by 18% in the period under investigation, an increase of 4% over the period under review. In this regard, the Ministry considers that the fall in the domestic price in the period under investigation would be associated with the decrease in the price of the imports subject to investigation and the conditions of undercutting under which they were made during the period analyzed, which corroborates the arguments of the Applicants, as indicated in the following points of this Determination.

162. In order to assess the existence of undercutting in the prices of imports with respect to the domestic price for sale to the domestic market (at the plant), the Ministry included the costs of importation (tariff, customs agent expenses and customs processing fees), both for the imports under investigation and for those from other origins, in order to bring them to a comparable level of trade.

163. In accordance with the foregoing, the Ministry noted that the average price of the imports investigated under alleged *dumping* conditions was 1% higher than the domestic sales price of the domestic industry in 2022. However, it was 35% below the national price in 2023 and 13% in the period under investigation. In relation to the average price of imports from other origins, the price of imports under investigation was lower throughout the period analyzed: 65% in 2022, 73% in 2023 and 79% in the period under investigation. With respect to the domestic price, imports from other origins were at higher prices during the period analyzed.

Domestic market prices for steel screws or threaded bolts

Source: Prepared by the Secretariat with information from the Applicants in the administrative file and in the Balance of Trade.

164. The Ministry considers that the declining behavior observed in the prices of subject imports and the levels of undercutting recorded during 2023 and the period under investigation are a factor that would explain the increase in its share of the domestic market, despite the contraction of the domestic market. It also considers that the decrease in the prices of the imports under investigation was a factor of pressure on the sales prices of the domestic product, since these also decreased in the period under investigation, in order to face the conditions of competition of the imports under investigation so as not to lose greater sales volumes, causing a negative performance of revenues, the operating profit and operating margin of the domestic industry, as described in the following paragraph of this Determination, which makes the domestic industry vulnerable to competition from subject imports under alleged *dumping*.

165. According to the results described in paragraphs 157 to 164 of this Determination, during the period under review, the imports under investigation registered significant levels of undercutting with respect to the domestic price and other sources of supply, which are associated with the alleged practice of price discrimination, in which they incurred, the elements of which were established in paragraph 104 of this Determination. In addition, the low price level of the imports under investigation with respect to the domestic price and with other sources of supply is associated with their increased market share and domestic production, a situation that has been reflected in a depression in the domestic sales price of the domestic industry in order not to lose market share.

7. Effects on the domestic industry

166. On the basis of Articles 3.1 and 3.4 of the *Antidumping Agreement*, 41(III) of the FTL, and 64(III) of the RLCE, the Ministry evaluated the effects of subject imports on the economic and financial indicators relating to the domestic industry of the like product.

167. Clavos C.N. and Clavos México argued that the increase in imports of dumped steel screws or threaded bolts under investigation caused material injury. They pointed out that the impact on economic and financial indicators has occurred via volumes and prices, mainly due to the enormous volume of imported products under investigation and the low prices at which they entered.

168. The United States mentioned that, as a result of the increase in the imports under investigation under *dumping* conditions, the domestic industry had negative effects on production, POMI, market share, domestic sales, wages, employment, utilization of installed capacity, and a decrease in its prices, which had a direct impact on its profits.

169. The Ministry analyzed the behavior and effects of the imports under investigation on the economic and financial indicators of the domestic industry of the like domestic product for each of the periods comprising the period analyzed. To that end, it considered the information provided by Clavos C.N. and Clavos México, by virtue of the fact that they constitute the domestic industry, as indicated in paragraph 131 of this Determination.

170. According to the information in the administrative file, the Ministry observed that the domestic market for steel screws or threaded bolts, as measured through the CNA, showed a decrease of 15% in the period analyzed, derived from an increase of 8% in 2023 and a fall of 21% in the period under investigation.

171. In this context of a decline in the domestic market, domestic production deteriorated during the period under review, decreasing by 0.3% in 2023 and by 14% in the period under investigation, which meant a fall of 14% in the period under review. The domestic industry's production increased by 5% in 2023, and decreased by 21% and 17% in the period investigated and analyzed, respectively.

172. For its part, the PNOMI decreased by 11% during the period analyzed, as a result of an increase of 5% in 2023 and a decrease of 15% in the period under investigation. The POMI of the domestic industry had a similar behavior, as it increased 5% in 2023, but decreased 21% in the period under investigation and 17% in the period analyzed.

173. With respect to participation in the domestic market, as described in paragraph 152 of this Determination, the contribution of the PNOMI in the CNA remained constant in the period analyzed at 11%. In this regard, and as indicated above, the Ministry observes that it is reasonable to consider that domestic production managed to maintain its share stable by reducing its sales price to the domestic market, mainly in the period under investigation, in response to unfair competition from Chinese imports at low prices and under conditions of undercutting, as indicated in paragraphs 160 and 163 of this Determination.

174. In contrast, the contribution of the imports under investigation in the CNA increased by 4 and 5 percentage points in the period investigated and analyzed, respectively. Meanwhile, imports from other origins decreased their contribution from 32% in 2022 to 31% in 2023 and 27% in the period investigated, which implied a drop of 4 and 5 percentage points in the period investigated and analyzed, respectively.

175. On the other hand, although POMI's contribution to the CNA remained constant in 2022 and 2023 at 6%, respectively, it decreased to 5% in the period under investigation, which translates into a drop equivalent to 1 percentage point in that period.

176. The Petitioners pointed out that their sales to the domestic market decreased as a result of the massive entry of steel screws or bolts of Chinese origin under dumped conditions. They indicated that these imports were made below their production costs and in some cases with a minimal profit, which resulted in their sales to the domestic market falling by 21% in the period under investigation and 25% in the period analyzed.

177. The Ministry observed that sales to the domestic market of the domestic industry decreased by 21% in the period analyzed, as a result of an increase of 6% in 2023 and a fall of 26% in the period under investigation.

178. For their part, the inventories of the domestic industry decreased by 27%, 37%, and 55% in 2023, in the period investigated and analyzed, respectively. This resulted in a reduction in the ratio of inventories to total sales, which went from 52% in 2022 to 30% in the period investigated, equivalent to a reduction of 22 percentage points in the period analyzed.

179. According to the information on sales to the domestic market provided by the Applicants, and the list of imports in the Balance of Trade, the Ministry observed that 69 customers of the like domestic product imported steel screws or threaded bolts under investigation, with the following results:

- to.** Imports of the product under investigation by the Applicants' customers increased by 12% during the period under review.
- b.** On the contrary, purchases by these companies from the domestic industry decreased by 63% in the period analyzed. In this regard, it was observed that, in absolute terms, the increase in the volume of purchases of the product under investigation was 1.8 times higher in relation to the reduction in domestic purchases in the period analyzed, which is indicative of a greater displacement of the domestic product.
- c.** The increase in purchases of the product under investigation by the Applicants' customers would be explained by two factors: both the fall in prices and the conditions of undervaluation. Indeed, the purchase prices of the Chinese product decreased 8% in the period analyzed and were made at prices below the national price: 35% in 2022, 42% in 2023 and 23% in the period investigated.

180. The Ministry considers that both the decline in the domestic industry's sales to these customers, as well as the increase in their imports and the underselling conditions under which these transactions were conducted, are indicative of the substitution of purchases of the domestic product for the product under investigation during the period under review.

181. According to the information in the administrative record, the Applicants did not make sales to the foreign market, so that the domestic industry depends entirely on sales to the domestic market, which places it in a position of high vulnerability to unfair competition from imports under presumably *dumped conditions*.

182. With respect to the installed capacity of the domestic industry, the Petitioners argued that they have intended to increase the number of machines to manufacture the like domestic product and, therefore, also to increase their installed capacity. However, due to the increase in subject imports under alleged *dumping*, as well as low percentages of installed capacity utilization, investment projects were halted.

183. The Petitioners provided the methodology by which the installed capacity of the domestic industry was estimated, considering the wire rod stamping and cutting capacity per hour for each machine, the shifts per day, the number of machines in the plant, and the days the plant operates per year. Based on the above, it was observed that the installed capacity of the domestic industry remained constant throughout the period analyzed.

184. Installed capacity utilization, measured as the ratio of production to installed capacity of the domestic industry, increased from 12% in 2022 to 13% in 2023, and subsequently declined to 10% in the period of investigation. The Ministry noted that the 3 percentage point decrease in the period under investigation was a consequence of the 21% drop in production during the same period.

185. Domestic industry employment remained constant during the period under review. For its part, the wage bill increased 19% in 2023 and decreased 24% in the period investigated, resulting in a decrease of 9% in the period analyzed.

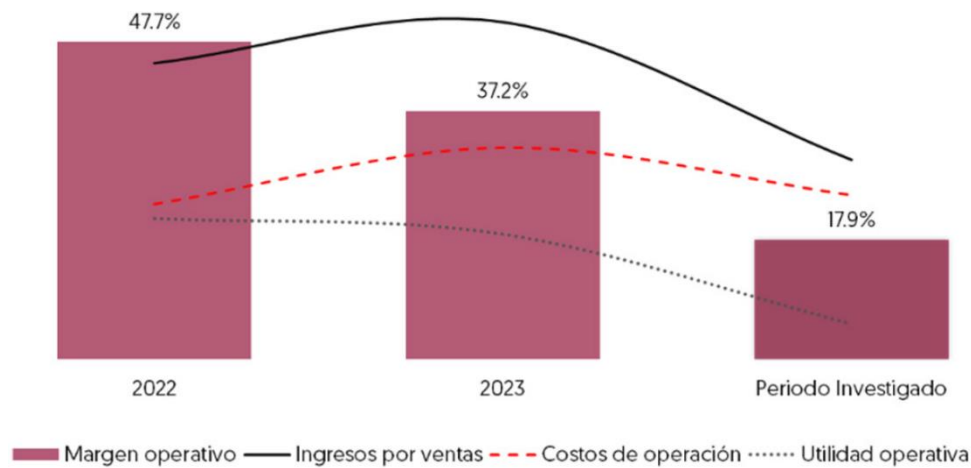

186. The performance of the production and employment of the domestic industry was reflected in a reduction in productivity in the period analyzed, expressed as the quotient between the two indicators, since it showed an increase of 5% in 2023 and a decrease of 21% in the period under investigation, which reflected a drop of 17% in the period analyzed. In this regard, the Petitioners indicated that the drop in productivity was mainly due to the effort they made to maintain their workforce, since it is considered essential to protect national employment. However, the pressure exerted by dumped imports on domestic production led to a decline in both domestic production and sales.

187. With respect to the domestic industry's financial indicators, the Petitioners noted that the decline in its operating profit was mainly due to two factors: (i) the reduction in sales in the domestic market, and (ii) the decline in domestic prices as a result of the pressure exerted by dumped imports at prices that did not allow the Applicants' sales prices to increase in proportion to the increase in their costs.

188. The Applicants provided their financial statements filed with the SAT, corresponding to the fiscal years 2022, 2023 and 2024. Likewise, they provided the statements of their costs, sales and profits of the sales of similar merchandise that they made in the domestic market, as well as their statements of costs and unit expenses, both for the period analyzed. The historical financial information was updated using the method of changes in the general price level, using the National Consumer Price Index calculated by INEGI, and evaluated the effects of imports under presumed *dumping* conditions on the operating results of the domestic industry of steel screws or threaded bolts. noting the following:

- to. Revenues from domestic production from sales of similar merchandise destined for the domestic market increased 14% in 2023 and decreased 41% in the period under investigation, which meant a cumulative decrease of 33% during the period analyzed.
- b. The behavior of operating costs (made up of costs of sale plus operating expenses) registered an increase of 37% in 2023 and a decrease of 23% in the period investigated, so they registered a growth of 6% during the period analyzed.
- c. Based on the behavior of sales revenues and operating costs of similar merchandise, a decrease in the operating profit of the domestic industry of 11% in 2023 and 72% in the period under investigation was observed. This meant a decrease in operating profits of 75% during the period analyzed.
- d. The operating margin of the domestic steel screw or bolt industry showed the following evolution: it went from 47.7% in 2022 to 37.2% in 2023 and 17.9% in the period under investigation, which meant a drop of 10.5 percentage points in 2023, 19.3 percentage points in the period under investigation and 29.8 percentage points in the period under review.

Statement of costs, sales and profits for sales in the domestic market of steel screws or threaded bolts

Source: Financial information submitted by the Applicants, which is in the administrative file.

189. The Ministry observed that, during the period under investigation, the deterioration in operating results and operating margin was explained by the fact that the decrease in sales revenues in the domestic market was at a higher rate than the decrease in operating costs, whereas, during the period under review, The deterioration in operating results and operating margin was due to sales revenues declining 33%, while operating costs increased by 6%.

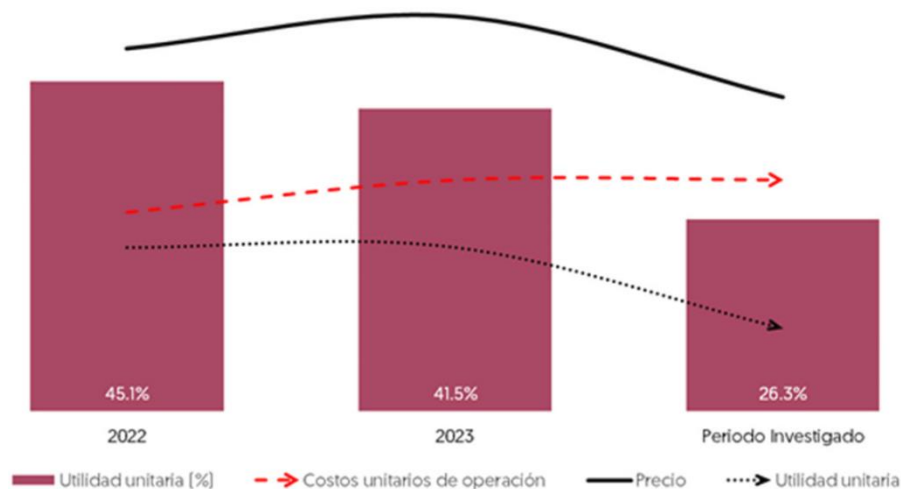

190. The Applicants explained that their price behaved inversely to that presented by the cost of production, because the sales price declined period after period due to the pressure exerted by imports under conditions of price discrimination.

191. In this regard, the Ministry observed that operating costs at the unit level—the sum of costs per kilogram plus operating expenses per kilogram of merchandise sold—increased by 16% in 2023 and remained constant during the period under investigation, resulting in a cumulative growth of 16% during the period under review.

192. Implicit sales prices in the domestic market per kilogram in pesos increased 9% in 2023 and decreased 21% in the period under investigation, resulting in a decrease of 13% during the period analyzed.

193. On the other hand, unit operating costs grew by 16% during the period under review. The sum of the evolution of unit costs and prices resulted in a unit profit 50% lower than that recorded by national production at the beginning of the period analyzed, as can be seen in the following graph:

Statement of costs and unit expenses of the like merchandise

Source: Financial information submitted by the Applicants, which is in the administrative file.

194. The Petitioners mentioned that they halted investment projects to increase installed capacity, due to the increase in subject imports at *dumped prices*.

195. The analysis of the financial variables of return on investment in assets, hereinafter ROA, *cash* flow and capacity to raise capital was carried out on the basis of the audited financial statements for the period analyzed,

since they consider the production of the most restricted group or range of products that include the national similar merchandise, pursuant to Article 3.6 of the *Antidumping Agreement* and Article 66 of the FTR.

196. The ROA of the domestic steel screw or threaded bolt industry—calculated at the operational level—increased by 8.4 percentage points in the period analyzed, from 11.7% to 20.1%. In the same period, the contribution of similar merchandise to ROA decreased 2.5 percentage points, from 3.3% to 0.8%, as shown in the following table:

Return on Investment

Index	2022	2023	2024
Return on Investment (ROA)	11.7%	18.4%	20.1%
Contribution of like product to ROA	3.3%	2.4%	0.8%

Source: Financial statements of the Applicants, which are in the administrative file.

197. Based on the cash flow statements of the domestic steel screw or threaded bolt industry for fiscal years 2022 to 2024, the Ministry analyzed cash flow at the operating level and observed that, in the period analyzed, it grew by 41.4%.

198. The capacity of the national industry to raise capital is analyzed through the behavior of the solvency, liquidity, leverage and debt ratios calculated with information from the financial statements. Below is a summary of the behavior of these indicators during the period analyzed:

Ability to raise capital

Index	2022	2023	2024
Circulating Ratio (times)	1.21	1.14	1.17
Acid test (times)	0.98	0.96	0.98
Leverage	409%	545%	500%
Debt	80%	85%	83%

Source: Financial statements of the Applicants, which are in the administrative file.

199. In general, a ratio of current assets to short-term liabilities is considered appropriate if it has a ratio of 1 to 1 or greater. Based on the information presented in the table above, the Ministry observed that the domestic industry's working capital ratio remained at adequate levels during the period under review.

200. With respect to the domestic industry's acid test (which refers to easily realized assets and is obtained by discounting the value of current asset inventories relative to short-term liabilities), this financial ratio was less than unit ratio from 2022 to 2024, which is considered insufficient since it limits their ability to meet their short-term obligations.

201. On the other hand, a proportion of total liabilities to stockholders' equity (leverage) or total liabilities to total assets (debt) is considered manageable if it is equivalent to 100% or less. In the period analyzed, the domestic industry showed high levels of leverage, since in the period analyzed this ratio remained above 100%, while the level of indebtedness remained at adequate levels since, in the same period, this ratio remained below 100%.

202. On the basis of the results described, the Ministry determined, initially, that there is sufficient evidence to presume that both the increase in imports of the product under investigation, relative to the domestic market and production, under alleged *dumping*, and the decrease in the price level during the period analyzed under conditions of undercutting, caused an impact on the relevant indicators of the domestic manufacturing industry of the like product, mainly in the period under investigation, with falls in the following economic indicators: production (21%), POMI (21%), market share (1 percentage point), sales to the domestic market (26%), wages (24%), utilization of installed capacity (3 percentage points) and productivity (21%).

203. In addition to the above, the greatest impact on the domestic industry was observed in the financial indicators as follows:

- to.** During the period under investigation, there was a decrease in sales revenues in the domestic market (41%) at a faster rate than the decrease in operating costs (23%). Meanwhile, during the period analyzed, sales revenues in the domestic market decreased (33%) and operating costs increased (6%).
- b.** Decrease in the operating profit of the domestic industry of 72% in the period under investigation and 75% in the period analyzed.
- c.** Operating margin decrease of 19.3 percentage points in the period under investigation and 29.8 percentage points in the period analyzed.

- d. Implicit prices in pesos in the domestic market registered a depression in the period analyzed (13%), while unit operating costs grew (16%), which resulted in a 50% lower profit per kilogram sold compared to the profit per kilogram sold that national production recorded at the beginning of the analyzed period. The foregoing confirms the impact on the domestic industry due to the inability to pass on the increase in its costs to its prices, due to the depression that they registered.
- and. The contribution of the like product to ROA decreased 2.5 percentage points in the period analyzed, going from 3.3% to 0.8%.
- f. The levels of leverage maintained by the domestic industry during the period analyzed represented a relevant risk as they were above 100% (between 409% and 545%), because this level of leverage limits the ability of managers to make decisions.

8. Other Injury Factors

204. Pursuant to Article 3.5 of the *Antidumping Agreement*, Article 39, last paragraph of the FTA, and Article 69 of the RLCE, the Ministry examined the possible concurrence of factors other than the imports under investigation under alleged *dumping* conditions that, in turn, could cause material injury to the domestic steel screw or bolt industry.

205. With respect to the existence of injury factors other than subject imports under alleged *dumping*, the Petitioners indicated the following:

- to. Imports from origins other than the one under investigation that were not made under conditions of *dumping*, in addition to the fact that they decreased throughout the period analyzed, they lost share in the CNA being displaced by the imports under investigation, and they stood at higher price levels than the imports under investigation.
- b. They have not detected restrictive trade practices of foreign and domestic producers, as well as an evolution of technology that has altered the demand or consumption structures of screws.

206. For its part, the Secretariat cautioned the Applicants to submit further information regarding the behavior observed in domestic demand and productivity, as indicated in paragraph 19 of this Determination. In response, they noted the following:

- to. In relation to the behavior of the CNA, they indicated that the pandemic caused by the SARS-CoV-2 virus continued in an important way until 2022, a year that coincides with the first period of the period analyzed. Once the situation was regularized, the demand for bras showed a slight decrease, returning to pre-pandemic levels. In the context of a declining CNA, only the imports under investigation showed an increase in the period under investigation compared to the immediately preceding period, while domestic production continued with the same downward trend caused mainly by imports under conditions of *dumping*.
- b. The decrease in productivity was mainly due to the effort they made to maintain their workforce, since it is considered essential to protect national employment. However, the pressure exerted by imports under conditions of *dumping* on national production caused a decrease in both production and sales.

207. The Ministry considers, at the outset, that there are no factors other than the imports under investigation that have caused a negative effect on the domestic industry, by virtue of the following:

- to. Although the CNA contracted in the period analyzed, the fall was uneven and less than proportional in the case of imports originating in China, which affected the composition of the market in favor of the latter. Indeed, the contribution of subject imports increased by 5 percentage points in the CNA during the period under review, from 57% in 2022 to 58% in 2023 and 62% in the period under investigation. The increase in the contribution of Chinese imports would be explained by the underselling conditions of 35% and 13% in 2023 and the period under investigation, respectively, as well as by the fall in implicit prices: 24% in 2023, 6% in the period under investigation and 29% in the period under review.
- b. Imports from the rest of the origins not only registered a fall, in absolute terms, of 33% in the period under investigation and 29% in the period under analysis, but also decreased their contribution by 5 percentage points in the CNA during the period under analysis, going from 32% to 31% and 27% in 2022, 2023 and the period under investigation, respectively. In addition, prices from other origins were above national prices throughout the period analyzed.
- c. The domestic industry did not export the like product during the period under review. With regard to national exports, although they showed a contraction of 44% in the period analyzed, their loss of contribution in relation to national production was not significant, since it only decreased by 3 percentage points with a share of 8% on average during the period analyzed.
- d. Productivity decreased by 21% in the period under investigation and by 17% in the period analyzed, but this is basically associated with the fall in the production of the domestic industry, which fell in the same proportion, since employment remained unchanged throughout the period analyzed. This in the

face of competition from Chinese imports under alleged conditions of *dumping* and significant levels of undervaluation.

and. The information in the administrative record of the case does not indicate that there were any technological innovations or changes in the structure of consumption, or that there were restrictive trade practices that could affect the performance of the domestic industry.

208. Based on the analysis described in paragraphs 204 to 207 of this Determination, the Ministry did not initially identify factors other than subject imports under alleged price discrimination that have at the same time caused material injury to the domestic industry.

H. Conclusions

209. Based on the results of the analysis of the arguments and evidence described in this Determination, the Ministry initially concluded that there are sufficient elements to presume that, during the period under review, and particularly in the period under investigation, imports of steel screws or threaded bolts were made under alleged conditions of price discrimination and caused material injury to the domestic industry of the like product. Among the main elements evaluated in a comprehensive manner, which support this conclusion, without being exhaustive or limiting, the following stand out:

- to.** Imports of the product under investigation were made with a margin of price discrimination greater than that of *Minimis* provided for in Article 5.8 of the Agreement *Antidumping*. In the period under investigation, imports originating in China accounted for 70% of total imports.
 - b.** Imports under investigation increased in relative terms. In relation to the CNA, they increased their contribution by 5 percentage points during the period analyzed, going from 57% in 2022 to 62% in the period investigated. In relation to national production, they increased 36 percentage points in the period analyzed, going from 3.7 times in 2022 above to 4.1 times higher in the period investigated.
 - c.** The prices of the investigated imports showed a decreasing behavior with falls of 24% in 2023, 6% in the period under investigation and 29% in the period analyzed, a situation that was reflected in a depression in the domestic sales price of the domestic industry of 18% in the period under investigation in order not to lose greater market share. This did not prevent the price of the investigated imports from registering an undercutting of 13% in relation to the domestic price in the period under investigation, taking into account that, in the previous period, 2023, the undercutting was even higher at 35%. The foregoing is an explanatory factor in the increase in the domestic market share of subject imports, which would displace domestic production and sales from the domestic market.
 - d.** The concurrence of subject imports under conditions of price discrimination had a negative impact on the relevant economic indicators of the domestic industry, mainly in the period under investigation, with declines in the following economic indicators: production (21%), POMI (21%), market share (1 percentage point), sales to the domestic market (26%), wages (24%), utilization of installed capacity (3 percentage points) and productivity (21%).
- and.** In addition to the above, the greatest impact on the domestic industry was observed in the financial indicators, as follows:
- i.** During the period under investigation, there was a decrease in sales revenues in the domestic market (41%) at a faster rate than the decrease in operating costs (23%). Meanwhile, during the period analyzed, sales revenues in the domestic market decreased (33%) and operating costs increased (6%).
 - ii.** Decrease in the operating profit of the domestic industry of 72% in the period under investigation and 75% in the period analyzed.
 - iii.** Operating margin decrease of 19.3 percentage points in the period under investigation and 29.8 percentage points in the period analyzed.
 - iv.** Implicit prices in pesos in the domestic market registered a depression in the period analyzed (13%), while unit operating costs grew (16%), which resulted in a 50% lower profit per kilogram sold compared to the profit per kilogram sold that national production recorded at the beginning of the analyzed period. The foregoing confirms the impact on the domestic industry, given the inability to pass on the increase in its costs to its prices, due to the depression that they registered.

- v. The contribution of the like product to ROA decreased 2.5 percentage points in the period analyzed, going from 3.3% to 0.8%.

Saw. The levels of leverage maintained by the domestic industry during the period analyzed represented a relevant risk as they were above 100% (between 409% and 545%), because this level of leverage limits the ability of managers to make decisions.

- f. The concurrence of injury factors other than subject imports under alleged price discrimination conditions that at the same time caused material injury to the domestic industry was not identified.

210. In view of the foregoing, and based on Articles 5 of the *Antidumping Agreement* and 52, sections I and II of the FTA, it is appropriate to issue the following

DETERMINATION

211. The request of the interested party is accepted and the initiation of the administrative Antidumping investigation procedure on imports of steel screws, originating in China, regardless of the exporting country, which enter through tariff headings 7318.15.04 and 7318.15.99 of the TIGIE, or by any other, is declared.

212. The period under investigation is set as the period from January 1, 2024 to December 31, 2024 and the period of injury analysis as the period from January 1, 2022 to December 31, 2024.

213. The Secretariat may apply the definitive countervailing duties that, as the case may be, are imposed on products that have been declared for consumption up to 90 days before the date of application of the provisional measures, as the case may be, in accordance with the provisions of Articles 10.6 of the *Antidumping Agreement* and 65 A of the FTA.

214. In accordance with Articles 6.1, 6.11, 12.1 and footnote 15 of the *Antidumping Agreement*, and 3, last paragraph and 53 of the FTA, domestic producers, importers, exporters, foreign legal entities or any person who proves to have a legal interest in the outcome of this investigation proceeding, shall have a period of 23 working days to prove their legal interest and submit the response to the forms established for such purposes, the arguments and evidence that they deem appropriate.

215. For the persons and Government indicated in point 18 of this Determination, the period of 23 working days shall begin to run five days after the date of notification of the initiation of this investigation. For interested parties, the period will begin to run five days after the publication of this Determination in the DOF. In accordance with the "Agreement by which the official address of the Ministry of Economy and the administrative units attached to it is disclosed", published in the DOF on December 7, 2023, and the "Agreement by which administrative measures are established in the Ministry of Economy in order to provide facilities to users of the procedures and procedures indicated", published in the DOF on August 4, 2021, the presentation of the information may be made electronically through the email address upci@economia.gob.mx from 09:00 a.m. to 6:00 p.m., or in physical form from 09:00 a.m. to 2:00 p.m. at the address located at Calle Pachuca number 189, Colonia Condesa, Cuauhtémoc Territorial Demarcation, Postal Code 06140, in Mexico City.

216. The forms referred to in paragraph 214 of this Determination may be obtained through the <https://www.gob.mx/se/acciones-y-programas/unidad-de-practicas-comerciales-internacionales-formularios-oficiales?state=published> website. They may also be requested through the email account upci@economia.gob.mx or at the address of the Secretariat.

217. On the basis of Article 53, third paragraph of the LCE, this Determination is notified to the companies and the Government of China that it is aware through the e-mails that have been identified and through the Embassy of China in Mexico, to the producing companies of their country and to any person who has a legal interest in the outcome of this proceeding. The copies of service are made available to any party who requests them and proves their legal interest in this procedure, through the email account indicated in the previous point of this Determination.

218. Communicate this Determination to the ANAM and the SAT for the corresponding legal effects.

219. This Determination shall enter into force on the day following its publication in the Official Gazette.

Mexico City, September 11, 2025.- The Secretary of Economy, **Marcelo Luis Ebrard Casaubon**.- Rubric.
